REPORT

TO THE SCOTTISH BOARD OF HEALTH.

GENERAL REGISTRY OFFICE OF BIRTHS, &C.,

NEW REGISTER HOUSE,

EDINBURGH, 30th August 1923.

GENTLEMEN,

In compliance with the requirements of the Registration of Births, Deaths, and Marriages Act (Scotland), 1854, 17 and 18 Vict., c. 80, I have the honour to submit the Sixty-eighth Annual Report on the Registration Statistics of Scotland, these being applicable to the year 1922, and with it I submit four Appendices, (1) a Report on the Vaccination of Children whose births were registered during the year 1921, (2) a Supplementary and Detailed Report on Marriages registered during the year 1921, (3) a Report on the Meteorological Observations of the Year 1922, this being supplied by the Meteorological Office, Edinburgh, and (4) a list of Alterations of Boundaries which became effective during the year 1922.

I have the honour to be,

GENTLEMEN,

Your most obedient Servant,

J. C. DUNLOP,

Registrar-General.

REPORT ON THE BIRTHS, DEATHS, AND MARRIAGES REGISTERED IN SCOTLAND DURING THE YEAR 1922.

THE population of Scotland in the middle of the year 1922 is estimated as 4,904,456, and this estimate shows an increase of 22,168 over that for the year 1921 as given in the previous issue of this Report, but shows an increase of 21,959 over a corrected estimate for 1921 which is incorporated in this report and may be seen in Table A. The earlier made estimate for the year 1921, 4,882,288, was based on the results of the recent Census as shown by the Preliminary Report, while that now used is based on the result of the Census as shown in the final or revised report.

Births registered in Scotland during the year numbered 115,085. This number, although 2683 in excess of the average during the previous five years, is 8116 less than in 1921, and 252 less than the average in the ten years 1912 to 1921. The birth-rate of the year was 23·47 per thousand. It is 1·77 less than that of the previous year, and 0·58 less than the mean of the rates of the ten years 1912 to 1921, but is 0·25 more than the mean of those of the previous five years. During the war period the national birth-rate showed a marked drop, falling from 26·11 in 1914 to under 21 in the years 1917 and 1918, but subsequent to the war the birth-rate increased, and in 1920 was 28·07 per thousand. This level has not been maintained as the rate fell to 25·23 in 1921, and now shows a further fall to 23·47. The birth-rate of the year is lower than the Scottish birth-rates of all years 1855 to 1922, with the exception of those of the years 1916, 1917, 1918 and 1919.

The illegitimate children registered during the year numbered 7881, which number is 876 less than in the previous year, 626 less than the average number in the five preceding years, and 581 less than the average number in the ten preceding years. It is less than in all years since 1856, with the exception of those influenced by the war, *i.e.*, 1915 to 1918. The illegitimate rate of the year was 6·85 per cent. of the registered births. It is lower than in all years since 1907; it is 0·26 less than that of the previous year, 0·74 less than the mean of those of the preceding five years, and 0·50 less than the mean of those of the preceding ten years.

Marriages registered during the year numbered 34,394, which number is less than in all recent years. It is 4849 less than in the previous year, 4607 less than the average in the five preceding years, and 1993 less than that in the ten preceding years. The annual marriage-rate was 7·01 per thousand, which is 1·02 less than in the previous year, 1·05 less than the mean of those of the five preceding years, and 0·57 less than the mean of those of the ten preceding years.

In continuance of the practice commenced two years ago a note of

the number of divorces in Scotland is incorporated in the Report. During the year intimations of 382 decrees of divorce or of nullity of marriage were received from the Court of Session. These decrees are 118 fewer than those of the previous year, 394 fewer than those of 1920, and 447 fewer than those of 1919.

Deaths registered in Scotland during the year in all numbered 72,905. This number is 6695 more than that registered in the previous year, 1426 more than the average of the numbers of the five preceding years, and 42 more than the average of those of the ten preceding years, and this increase may be largely attributed to epidemics of influenza and of measles. The annual death-rate was 14·87, which is 1·30 more than that of the previous year, 0·09 more than the mean of those of the preceding five years, and 0·33 more than the mean of those of the preceding ten years. It is higher than those of the individual years 1921, 1920, 1917 and 1916, but lower than all others since 1855.

The infantile mortality rate of the year was 101·4 per thousand registered births. It is 11·1 more than that of the previous year, and is 3·2 more than the mean of those of the preceding five years, but is 2·7 less than the mean of those of the preceding ten years. It is higher than in the four individual years 1916, 1918, 1920 and 1921, but is lower than in all other years since 1855.

The usual endeavour has been made to verify the ages of reputed centenarians. The deaths of 15 of these were registered during the year, and in 11 instances the reputed attainment of age 100 was verified. These enquiries have now been made for thirteen years and have dealt with the deaths of 177 reputed centenarians. In 74 instances attainment of age 100 was verified, but in 17 was contradicted, while in 86 satisfactory evidence was not obtainable. The centenarians dying during the year and whose ages were verified included 1 male and 4 females who were aged 100, 5 females who were aged 101, and 1 female aged 102.

Among the causes of death found to be more than usually prevalent, measles and influenza call for notice. These diseases were both epidemic. Deaths from measles during the year numbered 2695, which is the largest number in any year since 1893. These deaths are 2426 more than those registered in 1921, and 1272 more than the average number during the ten years 1911 to 1920. Deaths from influenza numbered 3706; they are 2376 more than in the previous year, 2367 more than in 1920, but they are 3509 fewer than in 1919, and 7405 fewer than in 1918.

The death-rates from tuberculosis and from phthisis both show a small increase over those of the previous year, but excluding that year these two rates are lower than in all previous years. The death-rate from all forms of tubercle was 119 per 100,000, and from phthisis 82. The mean of the death-rates from all forms of tubercle in the ten years 1911 to 1920 was 158, and from phthisis 105.

Deaths from cancer and other forms of malignant disease numbered 6133 and equalled a death-rate of 125 per 100,000; both this number and this rate are the largest recorded in Scotland; this death-rate is 12 more than the mean of those of the ten years 1911 to 1920, and 32 more than the mean of those of the ten years 1901 to 1910.

Deaths from diseases of the respiratory system, including pneumonia and bronchitis, were relatively numerous, numbering 2976 more than in the previous year.

Deaths from diseases and accidents of pregnancy in all numbered 759 and equalled a death-rate of 6·6 per thousand registered births. These deaths are 27 fewer than in the previous year, but this death-rate is 0·2 more than in that year.

Among deaths from violent causes it may be noted that those from coal gas poisoning, including those attributed to accidental poisoning as well as to suicidal poisoning, in all numbered 136. This number is 70 more than in 1921, 75 more than in 1920, 86 more than in 1919, and 97 more than in 1918. In the ten years 1911 to 1920 the annual average of these deaths was 32.

The vaccination statistics of the year 1921 are dealt with in Appendix I. The most outstanding feature is the continuation of the small proportion of children successfully vaccinated. Of the children born in that year and surviving at the time of compulsory vaccination—six months—only 70,890 or 62·5 per cent. were successfully vaccinated, while 42,609 or 37·5 per cent. were not so. The proportion successfully vaccinated—62·5 per cent.—is 8·1 less than in the previous year. It is, however, 8·0 more than a minimum of 54·5 per cent. which occurred in 1918. Certificates of conscientious objection on the part of parents were received in 34,098 instances, and this number equals 30·04 per cent. of the number of children surviving at the time for compulsory vaccination.

Additional marriage statistics of the year 1921 are given in Appendix II. The marriages of that year numbered 39,243; of them 33,108 were regular, *i.e.* solemnised by a minister of religion after proclamation by banns or by public notice, while 6135 were irregular, the former constituting 84·4 and the latter 15·6 per cent. of the total. Both numbers are less than in 1920; irregular marriages numbered 1713 less than in 1920, and 482 less than the mean of the five years 1916 to 1920, but numbered more than in all individual years since the institution of registration with the exception of the three years 1915, 1919 and 1920. Of the regular marriages of the year 76·6 per cent. were celebrated according to the rites of one or other of the large Presbyterian Churches, and 23·4 per cent. according to those of other denominations. The percentage of regular marriages celebrated in the Roman Catholic Church was

TABLE A.—Population of Scotland and its Groups of Public Health Districts in 1922.

GROUPS OF DISTRICTS.	Census 1921.			Census 1911.			Estimated to 30th June 1922.		
	Males.	Females.	Both Sexes.	Males.	Females.	Both Sexes.	Males.	Females.	Both Sexes.
Larger Burghs	1,133,202	1,230,694	2,363,896	1,113,172	1,210,531	2,323,703	1,141,013	1,239,173	2,380,186
Smaller Burghs	439,009	508,154	947,163	426,194	476,715	902,909	439,794	509,062	948,856

SCOTLAND .	2,347,642	2,534,855	4,882,497	2,308,839	2,452,065	4,760,904	2,358,201	2,546,255	4,904,456

12·8, and in the Episcopal Church 3·2. During the year 45 different religious denominations were named in the Marriage Registers; in 1920 this number was 46, and in 1919 it was 51.

ESTIMATED POPULATION FOR THE YEAR 1922.

The population of Scotland as ascertained by the Thirteenth Census was adopted as the estimated population of the year 1921. Between the middle of that year and the middle of the year 1922 the population of Scotland lost 24,669 by emigration, but gained 46,628 by excess of births over deaths, and as the balance of these two figures shows an increase of 21,959, the population for the middle of the year 1922 is estimated as 4,904,456.

The male population for the year 1922 is estimated at 2,358,201 and the female at 2,546,255.

Of the total estimated population of Scotland 2,380,186 or 48·5 per cent. is in the larger burghs—those burghs which have populations of 30,000 and over; 948,856, or 19·3 per cent., in the smaller burghs, and 1,575,414, or 32·2 per cent., in county or extra burghal districts. Compared with the estimate of the previous year that of the population of the larger burghs shows an increase of 16,290 or 0·69 per cent., that of the smaller burghs an increase of 1693 or 0·18 per cent., and that of the county districts an increase of 3976 or 0·25 per cent.

As explained in the Report for the year 1921, arbitrary estimates are used for estimating Birth, Death and Marriage rates in the County of Bute, in the Burghs of Cove and Kilcreggan, Dunoon, Earlsferry, Elie Liberty and Williamsburgh, Girvan, Kinghorn, Largs, Millport, Prestwick, Rothesay, Saltcoats, and Troon, and in the County Districts of Arran and Bute, this course being necessitated by the censal populations having been unduly inflated by the presence of summer visitors at the date of the Census.

Appendix IV. contains a list of alterations of burgh and other boundaries during the year. The principal of these are extensions of the Burghs of Leven and Grangemouth.

BIRTH STATISTICS.

The births of 115,085 living children were registered during the year 1922. This number is 8116 less than in the previous year, and 252 less than the mean of those of the preceding ten years, but

TABLE B.—Birth-rate in Scotland and its Groups of Public Health Districts in 1922.

GROUPS OF DISTRICTS.	Births.			Birth-rate per 1000 of Estimated Population.			Illegiti- mate Births per 100 Total Births.
	Total.	Legitimate	Illegitimate.	Total.	Legitimate	Illegitimate.	
Larger Burghs .	59,921	56,109	3,812	25·17	23·57	1·60	6·36
Smaller Burghs .	20,138	18,850	1,288	21·22	19·87	1·36	6·40
County Districts	35,026	32,245	2,781	22·23	20·47	1·77	7·94
SCOTLAND . .	115,085	107,204	7,881	23·47	21·86	1·61	6·85

is 2683 more than the mean of those of the preceding five years. In 1914, the last year in which birth statistics were unaffected by the recent war, births numbered 123,934, and during the war period the annual number of births fell to a minimum of 97,441 in 1917. Subsequent to the war this number rose, becoming 106,268 in 1919, and reaching a maximum of 136,546 in 1920, but since then has been declining, in 1921 falling to 123,201, and in 1922, as above stated, to 115,085. The births of the year numbered less than in all years subsequent to 1869 with the exception of the years 1915, 1916, 1917, 1918 and 1919. (*Table 1.*)

Of the 115,085 children registered, 58,826 were males and 56,259 were females. The male children of the year numbered 4249 less than in the previous year, and 192 less than the mean of the numbers of the preceding ten years, but 1236 more than the mean of those of the preceding five years. The female children numbered 3867 less than in the previous year, and 60 less than the mean of the numbers of the preceding ten years, but 1447 more than the mean of those of the preceding five years. (*Table 1.*)

The ratio of male to female children was 104·6 to 100. This ratio is 0·3 less than in the previous year, 0·5 less than the mean of those of the preceding five years, and 0·2 less than the mean of those of the preceding ten years. (*Table 2.*)

The Scottish birth-rate of the year was 23·47 per thousand. It is 1·77 less than that of the previous year, and is 0·58 less than the mean of those of the preceding ten years, but is 0·25 more than the mean of those of the preceding five years. The birth-rate of the year—23·47—is lower than that of all preceding years with the exception of the years 1916, 1917, 1918 and 1919, each of which was influenced by the recent war. From the year 1855 to 1893 the Scottish birth-rate was constantly over 30 per thousand, attaining a maximum of 35·62 in the year 1876. It fell below 30 for the first time in 1894, below 29 in 1905, below 28 in 1907, below 27 in 1910, and below 26 in 1911. In the war years it fell to a minimum of 20·26 in 1917. Subsequent to the war it rose to 28·07 in 1920, but has been falling since, being 25·23 in 1921 and now being 23·47. (*Table 2.*)

The birth-rate of male children per thousand of the male popula-

TABLE C.—Birth-rate per 1000 Women Aged 15-45, 1922.

GROUPS OF DISTRICTS.	Estimated Number of Women aged 15-45.	Births.		Birth-rate per 1000 of Population.		Birth-rate per 1000 Women aged 15-45.	
		Num-ber.	Percent. of Total.	Rate.	Relative Quantity, Scotland being=100.	Rate.	Relative Quantity, Scotland being=100.
Larger Burghs .	605,555	59,921	52·1	25·17	107·2	99·0	102·7
Smaller Burghs .	235,388	20,138	17·5	21·22	90·4	85·6	88·8
County Districts	352,908	35,026	30·4	22·23	94·7	99·2	102·9
SCOTLAND . .	1,193,851	115,085	100·0	23·47	100·0	96·4	100·0

tion was 24·95, and of female children per thousand of the female population 22·09, the former being 1·91 and the latter 1·64 less than in the previous year.

In the counties, burghs included, the birth-rate of the year varied from 27·1 in Lanark, 27·0 in West Lothian, 25·1 in Banff, 24·4 in Aberdeen, and 24·3 in Renfrew and in Stirling, to 13·9 in Argyll, 14·2 in Bute, 15·5 in Shetland, and 16·0 in Peebles. In 3 counties the birth-rate was more than 25, in 18 counties more than 20 but under 25, in 10 more than 15 and under 20, and in 2 under 15. (*Table 7.*)

Of the total births registered in the year 59,921 or 52·1 per cent. were registered in the larger burghs, 2138 or 17·5 per cent. in the smaller burghs, and 35,026 or 30·4 per cent. in the county districts. In the larger burghs taken collectively the annual birth-rate was 25·17, in the smaller burghs 21·22, and in the county districts 22·23. Compared with the corresponding rate in the previous year that of the larger burghs is 1·77 less, that of the smaller burghs 1·96 less, and that of the county districts 1·68 less. (*Table C.*)

In the larger burghs, taken individually, the birth-rate varied from 28·7 in Coatbridge, 27·7 in Greenock, 27·3 in Glasgow, and 27·0 in Hamilton, to 20·0 in Dunfermline, 20·7 in Edinburgh, 20·8 in Perth, and 22·7 in Ayr and in Kirkcaldy. In Clydebank this rate was 25·6, in Motherwell and Wishaw 25·3, in Aberdeen 24·9, in Paisley 24·8, in Kilmarnock 24·8, in Falkirk 24·8, and in Dundee 24·6. (*Table 4.*)

TABLE D (1).—Frequencies of Specified Birth-rates in Counties, Burghs, and County Districts, 1922.

Birth-rate per 1000.	Counties.	All Burghs and all County Districts.	All Burghs.	All County Districts.	Burghs with Populations		
					Over 30,000.	1000 to 30,000.	Under 1000.

TOTALS, ...	33	306	201	105	16	163	22

The smaller burghs of Scotland, those with populations of less than 30,000, in all number 185, and of these 163 have populations of more than 1000, while 22 have populations of less than that amount. In the former, *i.e.* among burghs with populations of more than 1000 but less than 30,000, the birth-rate of the year varied from 35·1 in Rothes, 32·9 in Whitburn, 31·2 in Borrowstounness and in Inverbervie, and 30·8 in Kilsyth, to 7·3 in North Berwick, 10·4 in Charlestown of Aberlour, 10·5 in Callander, and 10·7 in Millport. In 6 of these burghs the birth-rate exceeded 30 per thousand, in 36 it was between 25 and 30, in 46 between 20 and 25, in 56 between 15 and 20, in 18 between 10 and 15, and in 1 less than 10. (*Table 5.*)

In the county districts* the birth-rate of the year varied from 28·5 in the Middle Ward District of Lanark, 28·3 in Bathgate District of West Lothian, 28·0 in Ayr District of Ayr, and 27·7 in Machars District of Wigtown, to 8·2 in Cowal District of Argyll, 8·8 in Walls District of Orkney, 10·6 in Ardnamurchan District of Argyll, and 12·1 in Arran District of Bute and in Western District of Ross and Cromarty. (*Table 6.*)

The number of women in Scotland of child-bearing age—15 to 45—is estimated at 1,193,851, of whom 513,925 are married and 679,926 are either unmarried or widowed. As the births of the year number 115,085, the birth-rate expressed as per thousand of all women of these ages was 96·4, which rate is 8·6 less than in the previous year, and 20·2 less than in 1920. In the larger burghs taken collectively this rate was 99·0, in the smaller burghs 85·6, and in the county districts 99·2. In the counties, burghs included, this rate varied from 126·2 in West Lothian, 115·1 in Banff, 110·7 in Lanark, and 105·8 in Stirling, to 58·3 in Argyll, 61·7 in Peebles, 62·9 in Selkirk, 67·1 in Shetland, and 69·5 in Roxburgh. In the larger burghs this rate varied from 132·3 in Coatbridge, 122·1 in Greenock, 118·8 in Hamilton, and 112·2 in Motherwell and Wishaw, to 77·5 in Edinburgh, 78·5 in Dunfermline, 80·0 in Perth, and 86·4 in Ayr. (*Table 8.*)

Of the 115,085 children registered during the year, 107,204 or 93·15 per cent. were legitimate, while 7881 or 6·85 per cent. were illegitimate. Compared with the number in the previous year the legitimate children are 7240 fewer, and the illegitimate children are 876 fewer. Compared with the mean of the numbers of the preceding five years legitimate children numbered 3309 more, but illegitimate children 626 fewer. Compared with the mean of the numbers of the preceding ten years legitimate children numbered 329 more, but illegitimate children numbered 581 fewer. The number of illegitimate children registered during the year is smaller than in all years since 1856, with the exception of the years 1915 to 1918, a minimum number of 7295 being recorded in the year 1917. The maximum number of illegitimate children recorded in one year was 11,673, and occurred in 1866, and compared with it that of this year is 3792 or 32·5 per cent. less. (*Table 1.*)

The illegitimate rate of the year expressed as per cent. of the total births was 6·85. This rate is 0·26 less than that of the previous year, 0·74 less than the mean of those of the preceding five years, and

* In this and in corresponding paragraphs no notice is taken of the Cumbræ District of Bute, where the 1921 censal population was only 118.

0·50 less than the mean of those of the preceding ten years. It is lower than in all individual years since 1907. In the larger burghs taken collectively this rate was 6·36, in the smaller burghs 6·40, and in the county districts 7·94. In the previous year these three rates were 6·43, 6·95 and 8·35 respectively, and thus each is smaller in this than in that year. In the counties, burghs included, the illegitimate rate ranged from 15·4 per cent. in Wigtown, 13·8 in Moray, 13·3 in Banff, 12·7 in Kirkcudbright, and 12·1 in Aberdeen, to 4·6 in Clackmannan, 4·7 in Dumbarton and in Renfrew, 4·8 in Selkirk, and 5·1 in Ross and Cromarty and in West Lothian. In the larger burghs the illegitimate rate varied from 9·7 in Aberdeen, 8·4 in Perth, 7·2 in Ayr, 7·0 in Dundee, and 6·9 in Edinburgh, to 3·9 in Clydebank, 4·0 in Dunfermline, 4·3 in Coatbridge, and 4·5 in Greenock. In those of the small burghs in which at least 100 births were registered during the year this percentage varied from 15·4 in Elgin, 14·2 in Keith, 12·7 in Peterhead, 12·6 in Campbeltown, 11·0 in Stranraer, and 10·8 in Brechin, to 1·4 in Kilwinning, 1·9 in Galston, 2·0 in Bathgate, 2·7 in Lochgelly and in Renfrew, and 2·9 in Saltcoats. In county districts in which at least 100 births were registered this illegitimate rate varied from 20·4 per cent. in Islay District of Argyll, 20·3 in Huntly District of Aberdeen, 19·6 in Badenoch District of Inverness and in Turriff District of Aberdeen, 18·6 in Lockerbie District of Dumfries, and 18·5 in Rhins District of Wigtown, to 1·6 in Lews District of Ross and Cromarty, 2·9 in Mid Argyll District of Argyll, 3·0 in Lochaber District of Inverness, and 3·2 in Lorn District of Argyll. (*Tables 1-7.*)

The legitimate rate of the year expressed as per thousand of the estimated number of married women of child-bearing age, 15 to 45, was 209, which rate is 20 less than in the previous year, and 44 less than in 1920. In the larger burghs taken collectively this rate was 213, in the smaller burghs 189, and in the county districts 214. In the previous year these three rates were 231, 216 and 234, and thus each is now lower than it then was. In the counties, burghs included, this rate varied from 254·7 in Sutherland, 253·0 in Ross and Cromarty, 252·2 in Caithness, and 231·3 in West Lothian, to 147·1 in Argyll, 153·8 in Peebles, 156·2 in Bute, 164·1 in Selkirk, and 165·7 in Berwick. In the larger burghs this rate varied from 257·4 in Coatbridge, 235·8 in Greenock, 226·5 in Glasgow, 222·8 in Hamilton, to 138·6 in Dunfermline, 186·6 in Edinburgh, 189·8 in Perth, 190·3 in Ayr, and 191·8 in Kirkcaldy. (*Table 8.*)

The illegitimate birth-rate expressed as per thousand of the estimated number of unmarried women of child-bearing age, 15 to 45, was 11·6, which is 1·4 less than in the previous year, and 3·6 less than in 1920. In the larger burghs taken collectively this rate was 11·1, in the smaller burghs 9·5, and in the county districts 13·8. In the previous years these three rates were 11·9, 11·2 and 16·1, and thus that of the larger burghs is now 0·8 less, that of the smaller burghs 1·7 less, and that of the county districts 2·3 less than in that year. In the counties this rate varied from 27·5 per thousand in Banff, 25·0 in Wigtown, 23·9 in Moray, and 20·7 in Aberdeen, to 4·7 in Selkirk, 6·5 in Bute, 6·9 in Ross and Cromarty, and 7·2 in Peebles. In the larger burghs it varied from 15·9 in Aberdeen, 14·1 in Hamilton, 13·2 in Motherwell and Wishaw, 12·9 in Falkirk, and 11·9 in Glasgow,

to 6·8 in Dunfermline, 8·7 in Edinburgh, 9·0 in Paisley, and 9·1 in Clydebank. (*Table 8.*)

Of the 115,085 living children registered during the year 112,056 were single children, 2996 were twins, and 33 were triplets; thus of the total children born 97·37 per cent. were single children, 2·60 per cent. were twins, and 0·03 per cent. were triplets. From the foregoing figures it may be deduced that the total number of women giving birth to living children during the year was 113,565, and of these 112,056 gave birth to single children, 1498 to twins, and 11 to triplets, thus during the year one birth in 77 was a twin birth, and one in 10,462 a triplet birth. In this computation of single births, twins and triplets only live born children are counted—still-born children are not registered in Scotland—and thus a birth of one live child and one still-born child, or one of one live child and two still-born children, is counted as a single birth, and a birth of two live children and one still-born child is counted as a twin birth. (*Table 1.*)

The Scottish birth-rate of the first quarter of the year 1922 was 25·5, of the second quarter 24·6, of the third quarter 22·7, and of the fourth quarter 21·2. Compared with the rate for the corresponding quarter of the previous year that of the first quarter was 0·7 higher, but those of the second, third and fourth quarters were each lower, that of the second quarter being 2·9 lower, of the third quarter 1·7 lower, and of the fourth quarter 3·0 lower. Compared with the mean of the rates of the corresponding quarters of the preceding ten years that of the first quarter is 1·2 more, that of the second quarter is 0·8 less, that of the third quarter is 0·4 less, and that of the fourth quarter is 2·2 less. (*Table 3.*)

During the year the monthly birth-rate varied from 26·0 in January, 25·6 in February, and 25·0 in March, to 20·3 in November, 21·5 in October, and 21·7 in December. In May this rate was 24·9, in April 24·5, in June 24·3, in July 23·3, in August 22·4, and in September 22·3. (*Table 50.*)

The birth-rate of the year in England and Wales was 20·6, which is 2·9 less than the Scottish rate.

MARRIAGE STATISTICS.

In conformity with the scheme of these reports the marriage statistics of the year 1922 fall to be dealt with in two portions. In this Report there is incorporated the number of marriages registered during the year in Scotland and in its geographical divisions, while in the subsequent Report, that dealing with births, deaths and marriages of the year 1923, the more detailed marriage statistics of the year now under review, 1922, will be included. The statistics which will appear in the subsequent Report include those of the church of celebration, of the ages of the persons married, etc., in the same manner as the 1921 detailed marriage statistics are given in Appendix II. and in Tables 9 to 23 of this Report.

Marriages registered in Scotland during the year numbered 34,394. This number is 4849 less than that of the previous year, 4607 less than the mean of those of the preceding five years, and 1993 less than the mean of those of the preceding ten years. It is less than those of the individual years 1914, 1915, 1918, 1919, 1920

and 1921, but is more than those of all other previous years. A maximum number of marriages registered in Scotland, 46,754, occurred in 1920, and compared with that number the marriages of this year are 12,360 or 24·3 per cent. fewer. (*Table 1.*)

The Scottish marriage-rate of the year was 7·01 per thousand. It is 1·02 less than that of the previous year, 1·05 less than the mean of those of the preceding five years, and 0·57 less than the mean of those of the preceding ten years. The highest Scottish marriage-rate occurred in 1920 and was 9·61, whilst the lowest occurred in 1886 and was 6·31. Compared with the former the rate of this year is 2·6 less, but compared with the latter that of this year is 0·7 more. (*Table 2.*)

Of the total marriages registered during the year 20,652, or 60·0 per cent., were registered in the larger burghs, 6390, or 18·6 per cent., in the smaller burghs, and 7352, or 21·4 per cent., in the county districts. Compared with the number registered in the previous year that of marriages in the larger burghs is 3166, or 13·3 per cent., less, in the smaller burghs 809, or 11·2 per cent., less, and in the county districts 904, or 10·9 per cent., less. The marriage-rate in the larger burghs taken collectively was 8·68 per thousand, in the smaller burghs 6·73, and in the county districts 4·67. In the previous year these three rates were 10·08, 7·60, and 5·25 respectively, and compared with these that of the larger burghs shows a decrease of 1·40, that of the smaller burghs a decrease of 0·87, and that of the county districts a decrease of 0·58. (*Table 4.*)

In the counties, burghs included, the marriage-rate of the year varied from 8·8 per thousand in Midlothian, 8·1 in Lanark, 8·0 in Aberdeen, and 7·8 in Forfar, to 3·6 in Argyll, 4·0 in Shetland, and 4·1 in Ross and Cromarty and in Sutherland. (*Table 7.*)

In the larger burghs taken individually the marriage-rate varied from 10·1 in Aberdeen, 9·6 in Edinburgh, 9·5 in Perth, 9·1 in Glasgow, 8·8 in Falkirk, and 8·7 in Dundee, to 4·3 in Clydebank, 5·8 in Coatbridge, 6·2 in Motherwell and Wishaw, and 6·3 in Greenock. (*Table 4.*)

TABLE D (2).—Number of Divorces in Scotland (1855-1922), including Cases of Nullity of Marriage.

Year.	Intimations.	Year.	Intimations.	Year.	Intimations.	Year.	Intimations.
1855	11	1872	12	1889	100	1906	173
1856	16	1873	25	1890	87	1907	200
1857	18	1874	38	1891	107	1908	189
1858	12	1875	33	1892	118	1909	192
1859	24	1876	40	1893	112	1910	223
1860	23	1877	29	1894	120	1911	234
1861	27	1878	66	1895	117	1912	249
1862	26	1879	55	1896	133	1913	250
1863	9	1880	80	1897	142	1914	347
1864	2	1881	71	1898	135	1915	242
1865	4	1882	69	1899	176	1916	267
1866	4	1883	65	1900	144	1917	297
1867	5	1884	87	1901	158	1918	485
1868	13	1885	76	1902	204	1919	829
1869	7	1886	97	1903	194	1920	776
1870	17	1887	80	1904	182	1921	500
1871	11	1888	107	1905	167	1922	382

The marriage-rates of the smaller burghs and of the county districts are shown in Tables 5 and 6. These rates, and indeed those of the larger burghs and of the counties, may be indicative of the frequency of marriage within the particular localities, but, on account of the frequency of removal from a smaller burgh to a larger burgh and from a county district to a burgh for the purposes of marriage, these rates cannot be accepted as indicative of the frequency of marriage among the population of the particular areas.

Intimation of decrees of divorce or of nullity of marriage received from the Court of Session for the purposes of registration numbered 382. These decrees are 118 fewer than those of the previous year, 394 fewer than those of 1920, and 447 fewer than those of 1919. They are, however, more than those of each year 1855 to 1917. (*Table D (2).*)

The Scottish marriage-rate of the first quarter of the year was 6·5 per thousand, of the second quarter 7·1, of the third quarter 7·6, and of the fourth quarter 6·8. Compared with the rate of the corresponding quarter of the previous year, that of the first quarter is 2·6 less, that of the second quarter 0·7 less, that of the third quarter 0·3 less, and that of the fourth quarter 0·6 less. Compared with the mean of the corresponding rates of the preceding ten years, that of the first quarter is 0·8 less, of the second quarter 0·5 less, of the third quarter 0·4 less, and of the fourth quarter 0·6 less. (*Table 3.*)

The Scottish monthly marriage-rate during the year varied from 10·0 in June, 9·7 in July, 8·7 in January, and 8·6 in December, to 3·7 in May, 5·2 in March, and 5·3 in November. In April this rate was 7·8, in September 7·4, in October 6·4, in August 5·7, and in February 5·5. (*Table 50.*)

The marriage-rate of the year in England and Wales was 7·9, which is 0·9 more than the Scottish rate.

DEATH STATISTICS.

Deaths of persons registered in Scotland during the year in all numbered 72,905, those of males numbering 36,244 and those of females 36,661. These deaths numbered 6695 more than in the

TABLE E.—Deaths in Scotland and its Groups of Public Health Districts in 1922.

GROUPS OF DISTRICTS.	Population.	Deaths. Corrected.	Death-rate per 1000 of Population.		
			Uncorrected.	Corrected for Transfers.	Corrected for Transfers and Adjusted for Age and Sex Distribution.
Larger Burghs . . .	2,380,186	38,734	16·64	16·27	17·58
Smaller Burghs . . .	948,856	13,601	13·50	14·33	13·53
County Districts . . .	1,575,414	20,570	13·01	13·06	12·13
SCOTLAND . . .	4,904,456	72,905	14·87	14·87	14·87

previous year, 1426 more than the mean of the numbers of the preceding five years, and 42 more than the mean of those of the preceding ten years. The male deaths of the year numbered 3159 more than in the previous year and the female 3536 more. Deaths of males numbered 302 more than the mean of the numbers of the preceding five years, but 336 less than the mean of those of the preceding ten years. Those of females numbered 1124 more than the mean of the numbers of the preceding five years, and 378 more than the mean of the numbers of the preceding ten years. (*Table 1.*)

The Scottish death-rate of the year was 14·87 per thousand. It is 1·30 more than that of the previous year, 0·09 more than the mean of those of the preceding five years, and 0·33 more than the mean of those of the preceding ten years. It is higher than those of the individual years 1921, 1920, 1917 and 1916, but is lower than in all other earlier years. A maximum death-rate of 23·58 occurred in the year 1864, and compared with this the death-rate of the year is 8·71 or 36·9 per cent less. From 1855 to 1880, the year 1856 excepted, the national death-rate was constantly over 20 per thousand, from 1881 to 1893, with the exception of four years, constantly over 19 per thousand. It fell below 18 for the first time in 1894, below 17 in 1896, below 16 in 1909, and below 15 in 1916. Since 1915 the death-rate has once been over 16 and once between 15 and 16, but has been five times under 15 per thousand. (*Table 2.*)

The deaths of males in Scotland during the year equalled a death-rate of 15·37 per thousand of the male population, and those of females equalled a death-rate of 14·40 per thousand of the female population, the former being 1·28, and the latter 1·33, more than in the previous year. (*Table 2.*)

When dealing in this Report with the death statistics of counties, of burghs and of county districts, three rates are given. The first, the crude death-rate, is based on the number of deaths registered in the county, burgh or district, and is neither corrected nor adjusted in any manner. The second, the corrected death-rate, is based on the number of deaths registered, but is corrected by the exclusion of deaths of non-residents and the inclusion of the deaths of residents which may have taken place elsewhere in Scotland. The third, the corrected and adjusted rate, is the corrected death-rate adjusted to compensate for difference between the age and sex distribution of the local population and that of Scotland in its entirety. The first of these rates shows the actual frequency of death in the county, burgh or district, and the second the frequency of death in the population of the district, while the third is a statistical measurement useful for the purpose of comparison, as it indicates the relative frequency of death uncomplicated by variation in sex and age distribution.

In the counties, burghs included, the crude death-rate of the year varied from 16·7 in Orkney, 16·4 in Dumfries, 16·3 in Sutherland, and 16·2 in Inverness and in Lanark, to 10·5 in East Lothian, 11·0 in West Lothian, 11·2 in Kincardine, 12·1 in Ayr, and 12·2 in Argyll and in Dumbarton. In 19 counties the crude death-rate was less than the national death-rate, while in 14 counties it was more. In the counties the corrected death-rate varied from 17·3 in Sutherland, 17·2 in Orkney, 16·5 in Caithness, and 16·2 in Ross and

Cromarty and in Lanark, to 11·7 in East Lothian, 11·8 in Kincardine, 12·4 in Ayr and in Argyll, and 12·7 in West Lothian and in Dumbarton. The corrected and adjusted death-rate in the counties varied from 18·3 in Lanark, 17·0 in Renfrew, 15·1 in Midlothian, 14·7 in Clackmannan, 14·6 in West Lothian, and 14·4 in Forfar and in Stirling, to 10·0 in Argyll and in Shetland, 10·6 in Kincardine, 11·2 in Nairn, 11·4 in Sutherland, 11·7 in East Lothian and in Orkney, and 11·9 in Caithness and in Ross and Cromarty. The only counties in which the corrected and adjusted death-rate was in excess of the national death-rate were Midlothian, Renfrew and Lanark, while in all other counties this rate was less than the national rate. (*Table 7.*)

In the larger burghs taken collectively the uncorrected death-rate was 16·64, the corrected death-rate 16·27, and the corrected and adjusted death-rate 17·58, each of these rates being higher in this than in the previous year, the crude death-rate being 1·74 higher, the corrected death-rate 1·80 higher, and the corrected and adjusted death-rate 1·95 higher. The corrected and adjusted death-rate is 2·71 more than the national death-rate; in the previous year it was 2·07 more. (*Table 4.*)

In the smaller burghs taken collectively the uncorrected death-rate of the year was 13·50, the corrected death-rate 14·33, and the corrected and adjusted death-rate 13·53. In the previous year these three rates were 12·48, 13·28, and 12·54 respectively, and thus all three are now higher than in that year. The uncorrected death-rate is 1·02 higher, the corrected death-rate 1·05 higher, and the corrected and adjusted death-rate 0·99 higher. The corrected and adjusted death-rate of the smaller burghs is 1·34 less than the national death-rate, and 4·05 less than the corrected and adjusted death-rate of the larger burghs taken collectively. (*Table 4.*)

TABLE F.—Showing the Effect on the Death-rates of the Larger Burghs of Correction for Transfers and of Adjustment for Age and Sex Distribution in 1922.

LARGER BURGHS.	Death-rates.				
	Uncorrected.	Effect of Correction.	Corrected for Transfers.	Effect of Adjustment.	Adjusted for Age and Sex Distribution.
Coatbridge . . .	18·1	+0·9	19·0	+2·5	21·5
Greenock . . .	19·5	−0·3	19·2	+1·8	21·0
Glasgow . . .	17·5	−0·3	17·2	+2·2	19·4
Motherwell and Wishaw . . .	13·4	+1·6	15·0	+3·0	18·0
Paisley . . .	16·8	−0·7	16·1	+1·5	17·6

Ayr . . .	13·8	−1·8	12·0	+0·6	12·6

In the county districts taken collectively the crude death-rate was 13·01, the corrected death-rate 13·06, and the corrected and adjusted death-rate 12·13. In the previous year, these three death-rates were 12·19, 12·36 and 11·48 respectively, and thus the crude death-rate shows an increase of 0·82, the corrected death-rate an increase of 0·70, and the corrected and adjusted death-rate an increase of 0·65. The corrected and adjusted death-rate of these districts taken collectively is 2·74 less than the national death-rate, 5·45 less than that of the larger burghs, and 1·40 less than that of the smaller burghs. (*Table 4.*)

In the larger burghs taken individually the crude death-rate varied from 20·1 in Perth, 19·5 in Greenock, 18·1 in Coatbridge, 17·5 in Glasgow, 16·8 in Paisley, and 16·6 in Edinburgh, to 8·9 in Clydebank, 12·4 in Hamilton, 13·4 in Motherwell and Wishaw, and 13·5 in Kirkcaldy. In them the corrected death-rate varied from 19·2 in Greenock, 19·0 in Coatbridge, 17·2 in Glasgow, 16·8 in Perth, and 16·2 in Aberdeen and in Dundee, to 11·8 in Clydebank, 12·0 in Ayr, 12·2 in Dunfermline, and 13·8 in Hamilton. The corrected and adjusted death-rates of these burghs ranged from 21·5 in Coatbridge, 21·0 in Greenock, 19·4 in Glasgow, 18·0 in Motherwell and Wishaw, and 17·6 in Paisley, to 12·6 in Ayr, 13·2 in Dunfermline, 14·8 in Aberdeen, 14·9 in Clydebank, and 15·1 in Kirkcaldy. In Kilmarnock this rate was 16·5, in Dundee 16·2, in Hamilton 16·0, in Perth 15·9, in Edinburgh 15·5, and in Falkirk, 15·5. In 3 of these burghs, Ayr, Dunfermline and Aberdeen, the corrected and adjusted death-rate was lower than the national death-rate, while in the remaining 13 it was higher. (*Table 4.*)

In the smaller burghs, exclusive of those with populations of less than 1000, the crude death-rate of the year varied from 25·2 in Melrose, 24·6 in Whithorn, 24·4 in Banff, 24·2 in Coldstream, and 23·3 in Duns, to 6·5 in Kilrenny, 7·6 in Whitburn, 7·7 in Cockenzie and Port Seton, 7·8 in North Berwick, and 8·2 in Gourock. The corrected death-rate varied from 28·5 in Whithorn, 23·0 in Turriff, 22·6 in Coldstream, 22·3 in Duns, 22·2 in Stranraer, 22·1 in Auchtermuchty, and 22·0 in Castle-Douglas, to 7·5 in Kilrenny, 8·6 in North Berwick, 9·4 in Dollar, 9·5 in Oban, 9·6 in Whitburn, and 9·7 in St. Andrews. In these burghs the corrected and adjusted death-rate varied from 21·6 in Denny and Dunipace, 20·9 in Stranraer, 20·4 in Charlestown of Aberlour, 19·4 in Millport, 19·3 in Armadale, 19·2 in Prestonpans, and 18·9 in Castle-Douglas and in Port-Glasgow, to 6·2 in Kilrenny, 7·3 in Dollar, 7·9 in Ballater and in North Berwick, 8·1 in Old Meldrum, and 8·9 in Oban and in Newton-Stewart. In 49 of these burghs the corrected and adjusted death-rate was higher than the national rate, while in 114 it was lower. (*Table 5.*)

In the county districts taken individually the crude death-rate varied from 23·1 in Western District of Ross and Cromarty, 22·4 in Dumfries District of Dumfries, 21·8 in South Ronaldsay District of Orkney, 20·7 in Aberdeen District of Aberdeen, and 19·7 in Skye District of Inverness, to 8·7 in Laurencekirk District of Kincardine, 8·8 in Northern District of Kirkcudbright, 8·9 in Calder District of Midlothian and in Arbroath District of Forfar, and 9·0 in Carrick District of Ayr. In these districts the corrected death-rate varied from 25·5 in Western District of Ross and Cromarty, 22·3 in South

Ronaldsay District of Orkney, 21·0 in Skye District of Inverness, 18·6 in Mull District of Argyll, 18·4 in Western District of Kirkcudbright, and 18·0 in South-Western District of Ross and Cromarty and in North Isles District of Orkney, to 9·2 in Northern District of Kirkcudbright, 9·3 in Stonehaven District of Kincardine, 9·5 in Laurencekirk District of Kincardine, 9·6 in Cowal District of Argyll, and 10·0 in Western District of Perth. The corrected and adjusted death-rates of these districts varied from 15·0 in Middle Ward District of Lanark, 14·9 in Dumfries District of Dumfries, 14·6 in Western District of Kirkcudbright, 14·5 in County District of Clackmannan, and 14·3 in South Ronaldsay District of Orkney, to 7·8 in Cowal District of Argyll, 7·9 in Northern District of Kirkcudbright, 8·6 in Laurencekirk District of Kincardine, 8·7 in Stonehaven District of Kincardine, 9·0 in Badenoch District of Inverness, and 9·1 in Black Isle District of Ross and Cromarty and in Mainland District of Shetland. In 2 of these districts, Dumfries District of Dumfries and Middle Ward District of Lanark, the corrected and adjusted death-rate of the year exceeded the national death-rate, but in all others it was lower. (*Table 6.*)

The Scottish death-rate of the first quarter of the year was 21·7 per 1000, of the second quarter 14·5, of the third quarter 10·7, and of the fourth quarter 12·7. Compared with the corresponding rate of the previous year that of the first quarter is 5·1 higher, and that of the second quarter 1·3 higher, but that of the third quarter is 0·7 lower, and that of the fourth quarter 0·4 lower. Compared with the mean of the corresponding rates of the preceding ten years, that of

TABLE G.—Frequencies of Specified Death-rates, Corrected and Adjusted, in Counties, Burghs, and County Districts, 1922.

Death-rate per 1000.	Counties.	All Burghs and all County Districts.	All Burghs.	All County Districts.	Burghs with Populations

the first quarter is 3·6 higher, but those of the remaining three quarters are all lower, that of the second quarter being 0·5 lower, of the third quarter 1·6 lower, and of the fourth quarter 2·7 lower. (*Table 3.*)

The monthly death-rate varied from 27·1 per 1000 in January, and 22·0 in February, to 10·2 in September, and 10·4 in August. In April the death-rate was 16·4, in March 16·0, in May 14·8, in November 13·4, in December 13·4, in June 12·4, in July 11·3, and in October 11·3. The high death-rates occurring in January and in February were associated with an epidemic of influenza. (*Table 50.*)

The death-rate of the year in England and Wales was 12·9, which is 2·0 less than the Scottish rate.

AGES OF THOSE DYING.

Of the 72,905 persons whose deaths were registered during the year 19,188 or 26·3 per cent. were children of less than 5 years old, 28,739 or 39·4 per cent. were persons of between 5 and 65, and 24,977 or 34·3 per cent. were aged 65 and upwards. In one instance the age at death was not stated. Compared with the previous year deaths of children of under 5 numbered 3597 more; those of persons aged 5 to 65, 1170 more; and those of persons aged 65 and over, 1929 more. (*Table 24.*)

The age-group death-rates, both sexes included, varied from 270·9 per thousand in age-group 85 and over, 133·5 in age-group 75 to 84, and 103·2 in age-group under 1, to 1·9 in age-group 10 to 14, 2·7 in age-group 5 to 9, 3·4 in age-group 15 to 24, and 4·9 in age-group 25 to 34. A comparison with the corresponding rates in the previous year shows that the death-rates in age-groups 5 to 9 and 10 to 14 are less, but those in all other age-groups are higher. The most marked difference is found in age-group 85 and over,

TABLE H.—Monthly Mortality and Mean Temperature in Scotland during 1922, compared with the mean of the Ten Years 1911-1920.

MONTHS.	YEAR 1922.			1911-1920.	
	Mean Tempera- ture.	Actual Deaths.	Proportion to 1000 per month.	Proportion to 1000 per month.	Mean Tempera- ture.
January	37·0	11,295	1,860	1,159	37·9
February	38·7	8,292	1,365	1,149	39·0
March	40·6	6,676	1,099	1,198	39·6
April	41·0	6,607	1,087	1,078	44·2
May	51·3	6,152	1,013	1,012	50·1

December	41·3	5,578	918	1,101	38·8
YEAR	46·4	72,905	12,000	12,000	46·6

where the death-rate of this year was 270·9 as compared with 258·1 in the previous year. A comparison between the age-group death-rates of the male population and those of the female population shows the latter to be lower at all ages with the exception of ages 10 to 14, 15 to 24, and 25 to 34, in each of which the female rate was the higher, and in age-group 35 to 44, in which the male and the female death-rates are the same. (*Table 25.*)

The average age at death of all persons dying during the year was 43·34 years, that of males being 40·82, and of females 45·82. In the previous year these three averages were 44·47, 42·17, and 46·77, and thus the average age at death of the two sexes taken collectively is 1·13 less, of males 1·35 less, and of females 0·95 less. The average age of all males is 5·0 lower than that of all females.

The average age at death of the unmarried males was 16·9, and of unmarried females 23·2, the former being 1·1, and the latter 1·9, less than in the previous year. The male average is 6·3 less than the female.

The average age at death of married and widowed males taken collectively was 63·9, and of married and widowed females 64·1, the former being the same, but the latter 0·3 more than in the previous year. The male average is 0·2 less than the female.

The average age at death of married men was 59·8, and of married women 53·3, the former being 6·5 more than the latter. In the previous year this difference was 6·7. Compared with the average of the previous year that of married men dying is 0·1 more, and that of married women dying is 0·3 more.

The average age at death of widowers was 72·7 and of widows 74·1, the latter being 1·4 more than the former. In the previous year these two averages were 72·8 and 74·1, the difference being 1·3.

Deaths of children of less than 1 year old numbered 11,664, and as the total births registered during the year numbered 115,085, these deaths equal an infantile mortality rate of 101·4 per 1000 births. These deaths number 534 more than in the previous year, but, as the births of the year number less than in the previous year, this rate is 11·1 higher. The infantile mortality rate of the year is 3·2 more than the mean of those of the preceding five years, but is 2·7 less than

TABLE J.—Age-group Death-rates per 1000 of Population in 1922 and 1921.

	1922.		1921.		Difference, 1922 compared with 1921.		Difference per cent., 1922 compared with 1921.

85 & over	279·5	267·1	291·5	243·3	-12·0	+23·8	- 4·1	+ 9·8

the mean of those of the preceding ten years. It is lower than in all years previous to 1916, but is higher than in the individual years 1916, 1918, 1920 and 1921. (*Tables 1 and 2.*)

Deaths of male children of under 1 year numbered 6677, and of female children 4987, the former being 282 and the latter 252 more than in the previous year. The male infantile mortality rate was 113·5 per thousand male children registered, and the female mortality rate 88·6 per thousand female children registered. In the previous year these two rates were 101·4 and 78·8, and thus the former shows an increase of 12·1 and the latter an increase of 9·8.

In the counties, burghs included, the infantile mortality rate of the year varied from 116 in Lanark, 115 in Renfrew, 113 in Aberdeen, 103 in Forfar, and 100 in Clackmannan, to 52 in Berwick, 54 in Argyll, 55 in Orkney, 56 in Kinross, and 59 in Selkirk. In five counties this rate was under 60, in 11 counties between 60 and 80, in 12 counties between 80 and 100, and in 5 counties over 100. (*Table 7.*)

In the larger burghs taken collectively this rate was 114·2, in the smaller burghs 93·3, and in the county districts 84·1. Compared with the rate in the previous year that of the larger burghs is 13·5 more, of the smaller burghs 7·7 more, and of the county districts 8·6 more. (*Table 4.*)

In the larger burghs taken collectively the infantile mortality rate of the year was 12·8 more than the national rate. In the smaller burghs this rate was 8·1 less than the national rate, and 20·9 less than the larger burghs rate. In the county districts this rate was 17·3 less than the national rate, 30·1 less than the larger burghs rate, and 9·2 less than the smaller burghs rate. (*Table 4.*)

In the larger burghs taken individually the infantile mortality rate of the year varied from 149 in Greenock, 144 in Coatbridge, 133 in Aberdeen, and 120 in Glasgow, to 70 in Ayr, 87 in Dunfermline, 88 in Clydebank, and 91 in Edinburgh. In Paisley this rate was 117, in Motherwell and Wishaw 116, in Dundee 109, in Perth 109, in Kirkcaldy 104, in Hamilton 101, in Falkirk 96, and in Kilmarnock 95. (*Table 4.*)

There are 57 smaller burghs in which at least 100 births were registered during the year, and in these the infantile mortality rate of the year varied from 180 in Denny and Dunipace, 163 in Ardrossan, 141 in Lanark, 132 in Galston, and 126 in Stirling, to 43 in Gala-shiels, 46 in Lossiemouth, 46 in Dunoon, and 64 in Gourock, in Arbroath and in Dalkeith. In 3 of these burghs the infantile mortality rate was under 60, in 11 between 60 and 80, in 16 between 80 and 100, in 19 between 100 and 120, and in 8 it was over 120. (*Table 5.*)

There are 83 county districts in which at least 100 births were registered, and in them this rate varied from 129 in Dundee District of Forfar, 122 in Blairgowrie District of Perth, 117 in Dumfries District of Dumfries, 109 in Annan District of Dumfries, 108 in Kilmarnock District of Ayr, and 106 in Gala-Water District of Midlothian, to 10 in Mid Argyll District of Argyll, 14 in Aird District of Inverness, 28 in Highland District of Perth, 33 in Western District of Perth, 38 in Lorn District of Argyll, and 39 in Eastern District of Berwick. In 6 of these districts the infantile mortality

rate was less than 40, in 18 between 40 and 60, in 24 between 60 and 80, in 21 between 80 and 100, in 12 between 100 and 120, and in 2 it was over 120. (*Table 6.*)

Deaths among persons aged 70 and upwards numbered 19,199, 8099 being of males and 11,100 of females. Deaths among males of these ages equalled a death-rate of 121·8 per thousand of the estimated male population of these ages, and those among females equalled a death-rate of 108·0 per thousand of the female population of like ages. The death-rate at these ages of the two sexes taken collectively was 113·4. In the previous year the death-rate of males of these ages was 126·6, of females 104·1, and of the two sexes taken together 112·9. The male death-rate at these ages in this year is thus 4·8 less, and the female 3·9 more, than in that year.

The deaths of 15 reputed centenarians were registered during the year, of whom 14 were females and one a male. The ages of the male and of 6 females were recorded as 100, of 5 females as 101, of 2 females as 102, and of one female as 103. The usual endeavour has been made to verify the age at death of each of these reputed centenarians, with the result that the attainment of age 100 was found to be correct in 11 instances, 1 male and 10 females, but incorrect in 2 instances, while in 2 instances proof of age was unobtainable. The verified results show that of these reputed centenarians 1 male and 4 females had attained the age of 100, 5 females had attained the age of 101, and 1 had attained the age of 102. Researches into ages of reputed centenarians have now been made for 13 years, and have dealt with 177 cases; the result is that in 74 instances proof of the attainment of age 100 was found, in 17 instances proof contradicting attainment of that age was found, while in 86 instances no satisfactory proof in support or in contradiction of the attainment of that age was obtained.

CAUSES OF DEATH.

Of the 72,905 deaths registered during the year, 72,230, or 99·1 per cent., were certified as to cause either by a registered medical practitioner or by a procurator-fiscal, while 675, or 0·9 per cent., were not so certified. The number of uncertified deaths during the year is the smallest yet recorded. It is 41 less than in the previous year, 82 less than in 1920, and 425 less than in 1919. Forty years ago—in 1882—uncertified deaths in Scotland numbered 7220 and constituted 9·9 per cent. of the total, but this number has steadily decreased, falling below 5000 in 1889, below 3000 in 1896, below 2000 in 1904 and below 1000 in 1920. (*Table K.*)

Of the 675 deaths the causes of which were uncertified, 235 were registered in the County of Ross and Cromarty, 153 in the County of Inverness, 66 in the County of Shetland, 48 in the County of Sutherland, and 42 in the County of Argyll, and only 131 in the remainder of Scotland. In Ross and Cromarty the percentage of deaths uncertified was 21·4, in Shetland 18·8, in Sutherland 16·8, in Inverness 11·5, in Orkney 6·3, and in Argyll 4·5. In Berwick, Bute, Dumfries, Kirkeudbright, Moray, Nairn, Roxburgh, Selkirk and Wigtown all deaths registered during the year were certified. (*Table 49.*)

The causes of 71,743 deaths, or 98·4 per cent. of the total, were satisfactorily specified, while those of 936, or 1·3 per cent., were unsatisfactorily specified, being attributed to "sudden death," "heart failure," or other ill-defined condition, and those of 226, or 0·3 per cent., were unspecified or merely given as "Natural Causes." In the previous year deaths of which the causes were ill-defined numbered 844, and those of which the causes were not specified numbered 204, the former constituting 1·3 and the latter 0·3 per cent. of the total, these two percentages being the same as now found.

Enteric Fever.—Deaths from enteric fever numbered 65, which is the smallest number of deaths from this cause yet reported in Scotland in any one year. These deaths are 22 fewer than in the previous year, and 32 less than the mean of the numbers registered in the preceding five years. In the years 1865 to 1882 deaths from enteric fever in Scotland annually numbered more than 1000, and as a contrast to such figures it may be noted that in the last 6 years the number has only once exceeded 100. Of the 65 persons dying from enteric fever during the year 26 were males and 39 were females; of them 36 were aged between 15 and 24. The national death-rate from enteric fever was 1 per 100,000. (*Tables 30-40.*)

Typhus Fever.—There were 7 deaths from typhus fever registered during the year. In the previous year these deaths numbered 4. In the year 1865 deaths from typhus fever numbered 3272, and in the years 1866 to 1871 they constantly numbered more than 1000. Since 1891 they have constantly numbered less than 100, and in ten of the years since 1907 have numbered less than 10 annually. (*Table 39.*)

Small-pox.—There were no deaths from small-pox registered during the year. In the previous year they numbered 24. (*Table 39.*)

Measles.—Deaths from measles numbered 2695. This is the largest number of deaths in Scotland from this cause in any year since 1893, when they numbered 3639. In the year 1921 they numbered 269, and in the years 1919 and 1920 they averaged 858. The death-rate from this cause was 55 per 100,000, which rate is 49 more than that of the previous year, 25 more than the mean of the rates of the ten years 1911 to 1920, and 21 more than the mean of the rates of the ten years 1901 to 1910. In the male population this death-rate was 61 and in the female 49. In the larger burghs taken collectively deaths from measles registered during the year numbered 2168, and the death-rate was 91 per 100,000; in the smaller burghs they numbered 232, and the death-rate was 24; and in the county districts they numbered 295, and the death-rate was 19. Of the 2168 deaths from measles in the larger burghs 1292 were in Glasgow, 162 in Greenock, 140 in Aberdeen, 129 in Coatbridge, and 113 in Edinburgh. In these burghs the death-rate varied from 291 in Coatbridge, 199 in Greenock, 145 in Motherwell and Wishaw, and 124 in Glasgow, to 12 in Perth, and 19 in Kilmarnock. Of those dying from measles 1856 were aged over 1 but under 5, 693 were aged under 1, and 122 were aged more than 5 but under 10, while only 24 were aged 10 and over. Of the total deaths registered in Scotland during the year 3·7 per cent. were attributed to measles. (*Tables 30-40.*)

Scarlet Fever.—Deaths from scarlet fever in all numbered 247, 109 being of males and 138 of females. These deaths number 23 fewer than in the previous year, but 2 more than in 1920, and 25 more than in 1919. The death-rate from this cause was 5 per 100,000, which is 1 less than in the previous year, 5 less than the mean of those of the years 1911 to 1920, and 4 less than the mean of those of 1901 to 1910. Deaths from scarlet fever in Scotland in all years 1865 to 1887, the year 1885 excepted, constantly numbered more than 1000 annually, and attained a maximum of 6321 in the year 1874, but since 1887 the number of these deaths has been markedly smaller, being constantly less than 1000, and in 14 years since 1901 being less than 500. The minimum number in any one year was 168, which occurred in 1918. (*Tables 30-40.*)

Whooping-Cough.—Deaths from whooping-cough during the year numbered 1408, 639 being of males and 769 of females. This number is 70 less than in 1921, 780 more than in 1920, and is less than in each of the years 1917 to 1919. The death-rate from this cause was 29 per 100,000, which is 1 less than in 1921, but is 16 more than in 1920. It is, however, lower than in each of the years 1917 to 1919, 5 less than the mean of those of the ten years 1911 to 1920, and 15 less than the mean of those of the ten years 1901 to 1910. In the male population this death-rate was 27, and in the female population 30. In the larger burghs taken collectively it was 31, in the smaller burghs 31, and in the county districts 24. In the larger burghs taken individually this death-rate varied from 140 in Coatbridge, 122 in Greenock, 64 in Aberdeen, and 62 in Falkirk, to 0 in Ayr, 3 in Kilmarnock, 11 in Dundee, and 15 in Hamilton. Of these 1408 deaths, 604 were among children of less than 1 year old, and 768 among children of more than 1 but less than 5 years old, and only 2 among persons aged 15 years and upwards. The months of the year in which deaths from whooping-cough were

TABLE K.—Deaths from Uncertified Causes, 1881-1922.

Year.	Uncertified Causes.	Percentage of Uncertified to Total.	Year.	Uncertified Causes.	Percentage of Uncertified to Total.
1881	7863	10·9	1902	2180	2·8
1882	7220	9·9	1903	2058	2·8
1883	7278	9·5	1904	1893	2·4
1884	6487	8·6	1905	1741	2·3
1885	6204	8·3	1906	1727	2·3
1886	5932	8·1	1907	1796	2·3
1887	5466	7·3	1908	1654	2·1
1888	5029	7·1	1909	1552	2·1
1889	4566	6·2	1910	1396	1·9
1890	4569	5·8	1911	1135	1·6

1892	4267	5·6	1913	1401	1·9
1893	3729	4·7	1914	1220	1·7
1894	3290	4·6	1915	1514	1·9
1895	3222	3·9	1916	1294	1·8
1896	2509	3·6	1917	1387	2·0
1897	3041	3·8	1918	1216	1·6
1898	2459	3·1	1919	1100	1·5
1899	2425	3·0	1920	757	1·1
1900	2757	3·4	1921	716	1·1
1901	2392	3·0	1922	675	0·9

most numerous were January, February, March and April, when they numbered 265, 213, 143 and 144 respectively. (*Tables 30-40, and page 40.*)

Diphtheria.—Deaths from diphtheria, including those certified as due to membranous laryngitis or to croup, numbered 550, of which 536 were certified as due to diphtheria or to membranous laryngitis, and 14 to croup. Of these deaths 286 were of males and 264 were of females. These deaths are 75 fewer than those of the previous year, 174 fewer than those of 1920, and 177 fewer than those of 1919. This is the smallest number of deaths from these causes registered in Scotland in any one year, the previous smallest number being 648, which occurred in 1917. The death-rate from these causes was 11 per 100,000; it is 2 less than in the previous year, 6 less than the mean of those of the ten years 1911 to 1920, and 7 less than the mean of those of the ten years 1901 to 1910. Since the decade 1861 to 1870 this death-rate has steadily fallen; in that decade it was 68 per 100,000, in 1871 to 1880 it was 55, in 1881 to 1890 it was 43, in 1891 to 1900 it was 29, in 1901 to 1910 it was 18, in 1911 to 1920 it was 17, and is now, in 1922, 11. In the larger burghs taken collectively this death-rate was 12, in the smaller burghs 11, and in the county districts 10. In the larger burghs taken individually this death-rate varied from 33 in Kilmarnock, 15 in Falkirk, and 14 in Edinburgh and in Ayr, to 0 in Kirkealdy, 3 in Motherwell and Wishaw, and 4 in Paisley. In Glasgow it was 14, in Dundee 13, and in Aberdeen 9. Of the 550 dying from these causes 45 were children of less than 1 year old, 316 were children of over 1 but under 5, 144 were children of over 5 but under 10, while only 19 were persons aged 15 and upwards. The months of the year in which deaths from diphtheria were most numerous were January (87), February (67), and December (64). In September they numbered 23, and in May and August 32. (*Tables 30-40, and page 40.*)

Principal Epidemic Diseases Death-Rate.—Enteric fever, measles, scarlet fever and whooping-cough are, for statistical purposes, grouped along with the diarrhoeas of children of less than two years old, and the death-rate due to them collectively is referred to as the principal epidemic diseases death-rate. These deaths in all number 5843, and this death-rate was 1·19 per thousand. It is 0·32 more than in the previous year, and 0·22 more than the mean of the rates of the preceding five years, but is 0·01 less than the mean of those of the preceding ten years. In the larger burghs taken collectively this death-rate was 1·64, in the smaller burghs 0·84, and in the county districts 0·72. In the previous year these three rates were 1·14, 0·61 and 0·61 respectively, and that of the larger burghs shows an increase of 0·50, of the smaller burghs an increase of 0·23, and of the county districts an increase of 0·11. In the larger burghs taken individually this death-rate varied from 4·96 in Coatbridge, 3·47 in Greenock, 2·15 in Motherwell and Wishaw, 1·93 in Glasgow, and 1·85 in Aberdeen, to 0·50 in Ayr, 0·59 in Dunfermline, 0·69 in Perth, 0·80 in Dundee, and 0·88 in Edinburgh. In those of the smaller burghs which have populations of more than 1000 this rate varied from 3·99 in Prestonpans, 3·76 in Tranent, 3·20 in Charlestown of Aberlour, 3·18 in Borrowstounness, and 3·13 in Denny and Dunipace, to 0 in 47 of these

burghs. In the county districts this rate varied from 1·63 in the Middle Ward District of Lanark, 1·53 in Gala-Water District of Midlothian, 1·50 in Kirkealdy District of Fife, 1·27 in Central District of Stirling, and 1·09 in Calder District of Midlothian and in Northern District of Ayr, to 0 in 17 of these Districts. (*Tables 4-6.*)

Other Epidemic Diseases.—Deaths due to epidemic or infectious diseases other than those already named, and exclusive of influenza, included among others 174 from erysipelas, 103 from cerebro-spinal meningitis, 45 from encephalitis lethargica, 8 from dysentery, 7 from malaria, and 21 from infantile paralysis. Compared with the number in the previous year those from infantile paralysis are 4 more, and from cerebro-spinal meningitis 1 more, but those from erysipelas are 35 fewer, from encephalitis lethargica 16 fewer, from dysentery 14 fewer, and from malaria 11 fewer. This group of deaths also includes 12 from chicken-pox, 10 from posterior basal meningitis, 1 from pellagra, 5 from mumps, 5 from German measles, and 1 from sprue. (*Page 4.*)

Influenza.—Deaths from influenza during the year numbered 3706, 1701 being of males and 2005 of females. In 1921 these deaths numbered 1330; in 1920, 1339; in 1919, 7215; and in 1918, 11,111. These deaths number 2376 more than in 1921, and 2367 more than in 1920, but 3509 less than in 1919, and 7405 less than in 1918. Of these 3706 deaths, 623 were attributed to influenza as the sole cause, while 3083 were attributed to influenza along with some complicating disease, the most frequent complication being pneumonia (1648), bronchitis (603), other respiratory diseases (124), phthisis (73), and diseases and accidents of pregnancy and childbirth (52). The influenza death-rate of the year was 76 per 100,000. This rate is 49 more than that of the previous year, and 48 more than that of 1920, but is 71 less than that of 1919,

TABLE L.—Deaths from Influenza in Scotland in each month, 1921 and 1922.

YEAR .	1330	308	1022	YEAR .	3,706	623	3083

and 151 less than that of 1918. In the male population this death-rate was 72, and in the female population 79. In the larger burghs taken collectively it was 84, in the smaller burghs 74, and in the county districts 65. In the larger burghs taken individually it varied from 125 in Kirkcaldy, 124 in Motherwell and Wishaw, and 109 in Paisley, to 58 in Ayr, 60 in Dundee, and 63 in Aberdeen. (*Tables 34 and 36, and page 4.*)

Of those dying from influenza, 651 or 17·6 per cent. were children of under 5, 1853 or 50·0 per cent. were aged 5 to 64, and 1202 or 32·4 per cent. were aged 65 and over. (*Table 30.*)

The months of the year in which deaths from influenza were most frequent were January, February and March. (*Page 40.*)

Tuberculosis.—Deaths from all forms of tuberculous disease numbered 5818, 2985 being of males and 2833 of females. This number is 81 more than in the previous year, but is less than in any other year since the institution of registration, and that is since 1855. A maximum number of deaths from this cause, 13,027, occurred in 1870, and compared with that figure the deaths of this year are 7209, or 55·3 per cent. less. In 1870 and 1871 deaths from tuberculosis numbered fully 13,000 annually, and in the years 1872 to 1883 they were constantly more than 11,000. In 1888 this number fell for the first time below 10,000, in 1910 below 9000, in 1914 below 8000, in 1919 below 7000, and in 1921 below 6000. (*Table 39.*)

The general death-rate in Scotland from tuberculosis was 119 per 100,000, which is 1 more than in 1921, but is less than in all other previous years. It is 39 less than the mean of those of the ten years 1911 to 1920, and 92 less than the mean of the ten years 1901 to 1910. In the decade 1861 to 1870 this death-rate was 379 per 100,000, but since then has steadily fallen, the mean rate of the decade 1871 to 1880 being 354, of the decade 1881 to 1890, 278, of the decade 1891 to 1900, 239, of the decade 1901 to 1910, 211, and of the decade 1911 to 1920, 158. The year now under review, 1922, is the fourth consecutive year in which this death-rate has been less than 140. (*Table 40.*)

In the larger burghs taken collectively this death-rate was 136, in the smaller burghs 109, and in the county districts 98. In the previous year these three death-rates were 134, 106 and 100 respectively, and thus in the larger burghs it shows an increase of 2, and in the smaller burghs an increase of 3, but in the county districts a decrease of 2. In the counties (burghs included) the tuberculosis death-rate varied from 202 in Shetland, 183 in Sutherland, 165 in Ross and Cromarty, 144 in Inverness, and 142 in Renfrew, to 46 in Nairn, 63 in Kinross, 82 in East Lothian, and 85 in Kincardine and in Banff. In the larger burghs taken individually this rate varied from 171 in Greenock, 150 in Falkirk, 149 in Glasgow, 137 in Dundee, 135 in Coatbridge, and 133 in Hamilton, to 100 in Ayr, 103 in Kirkcaldy, 105 in Kilmarnock, and 107 in Dunfermline. In Aberdeen this rate was 115, and in Edinburgh 126. In the smaller burghs with populations of over 1000 this rate varied from 336 in Kirkeudbright, 329 in Turriff, 299 in Old Meldrum, 269 in Inverkeithing, 239 in Rothes, and 236 in Dumfries, to 0 in 14 of these burghs. In the county districts this rate varied from 339 in Walls District of Orkney, 268 in North Isles District of Shetland, 263 in

Western District of Ross and Cromarty, 228 in Lews District of Ross and Cromarty, 221 in North Uist District of Inverness, and 210 in Harris District of Inverness, to 19 in Western District of Berwick, 20 in Laurencekirk District of Kincardine, 22 in Stonehaven District of Kincardine, and 32 in North Isles District of Orkney. (*Tables 4-6 and Table M.*)

Of the 5818 deaths from tuberculosis, 4041 were ascribed to pulmonary tuberculosis, 20 to laryngeal tuberculosis, 594 to tuberculous meningitis, 538 to tuberculosis of the intestines, 108 to tuberculosis of the spine, 59 to tuberculosis of the joints, and 458 to tuberculosis of other organs or to disseminated tuberculosis, the latter number including 108 from acute disseminated tuberculosis, 186 from chronic disseminated tuberculosis, 45 from tuberculosis of the genito-urinary system, 29 from tuberculosis of lymphatic glands (abdominal glands excepted), 25 from tuberculosis of the bones (except spine), and 9 from tuberculosis of skin.

The deaths certified as due to pulmonary tuberculosis numbered 4041. This number is 95 more than in 1921, but less than in all other years since the institution of national registration. During the twenty-two years 1862 to 1883 with only three exceptions the deaths from phthisis numbered more than 8000 annually, and attained a maximum of 9148 in 1870, but since that year the number has steadily declined, falling below 8000 in 1881, below 7000 in 1892, below 6000 in 1910, and below 4000 in 1921. Compared with the

Perth	33,212	120	78	24	6	12

maximum number of deaths from phthisis the number of this year is 5107, or 55·8 per cent. less. (*Table 39.*)

The phthisis death-rate of the year is 82 per 100,000. It is 1 more than in the previous year, but 23 less than the mean of those of the ten years 1911 to 1920 and 57 less than the mean of those of the ten years 1901 to 1910. The only year in which this death-rate was lower was 1921. It is the fourth consecutive year in which this death-rate has been under 90. The fall of the phthisis death-rate in Scotland has been continuous. In the decade 1861 to 1870 this death-rate averaged 268 per 100,000, in the decade 1871 to 1880 it fell to 244, in the decade 1881 to 1890 it fell to 202, in the decade 1891 to 1900 to 171, in the decade 1901 to 1910 to 139, and in the decade 1911 to 1920 to 105. The phthisis death-rate of the year is 69·4 per cent. less than that of the decade 1861 to 1870, 66·4 per cent. less than that of the decade 1871 to 1880, 59·4 per cent. less than the decade 1881 to 1890, 52·0 per cent. less than the decade 1891 to 1900, 41·0 per cent. less than that of the decade 1901 to 1910, and 21·9 per cent. less than that of the decade 1911 to 1920. (*Table 40.*)

Deaths certified as due to laryngeal tuberculosis numbered 20, and their inclusion would raise the phthisis death-rate of the year to 83 per 100,000.

Of the 4061 deaths from tuberculosis of the respiratory system 2058 were of males and 2003 of females, the death-rate in the male population from this cause being 87 per 100,000, and in the female population 79, the former being 3, and the latter 1, more than in the previous year. (*Tables 33 and 34.*)

In the larger burghs taken collectively the phthisis death-rate of the year was 97 per 100,000, in the smaller burghs 74, and in the county districts 67. In the previous year these three rates were 95, 70 and 68, and comparison shows that in the larger burghs this rate is now 2 more, and in the smaller burghs 4 more than in that year, but in the county districts it is 1 less. (*Table 34.*)

In the larger burghs taken individually the phthisis death-rate of the year varied from 111 per 100,000 in Glasgow, 103 in Greenock, 98 in Dundee, 96 in Clydebank, and 91 in Paisley, to 58 in Motherwell and Wishaw, 75 in Kilmarnock and in Hamilton, and 78 in Ayr and in Perth. In Aberdeen this rate was 88, in Edinburgh 87, in Falkirk 86, in Coatbridge 83, in Kirkcaldy 80, and in Dunfermline 79. (*Table 36.*)

In burghs with populations of between 1000 and 30,000 the phthisis death-rate varied from 299 in Old Meldrum, 282 in Turriff, 239 in Inverkeithing, 239 in Rothes, 192 in Kirkcudbright, and 188 in Lerwick, to 0 in 27 burghs. (*Table 5.*)

In the county districts this rate varied from 339 in Walls District of Orkney, 237 in Western District of Ross and Cromarty, 204 in Ardnamurchan District of Argyll, 191 in Lews District of Ross and Cromarty, and 182 in Upper Deeside District of Kincardine, to 0 in Western District of Berwick, in Stonehaven District of Kincardine, and in Liddesdale District of Roxburgh, 14 in Gala-Water District of Midlothian, and 15 in Ellon District of Aberdeen. (*Table 6.*)

The largest number of deaths from tuberculosis of the respiratory

system occurred in age-groups 15 to 24, 25 to 34, and 35 to 44, being 980, 974 and 825 respectively. In age-group 45 to 54 they numbered 525, and in age-group 55 to 64 they numbered 341. At ages 65 and onwards these deaths numbered 128, and at ages under 15 they numbered 289. The age-group death-rates from this cause varied from 136 in age-group 25 to 34, 130 in age-group 35 to 44, and 108 in age-group 15 to 25, to 11 in age-group 5 to 9, 18 in age-group under 1, 19 in age-group 85 and over, and 25 in age-groups 1 to 4 and 10 to 14. (*Tables 30 and 31.*)

The months of the year in which deaths from tuberculosis of the respiratory system were most frequent were March (428), January (406), May (399), and February (392), and those in which they were least frequent were September (253), November (270), and October (290). (*Page 40.*)

Deaths from tuberculous meningitis numbered 594, and equalled a death-rate of 12 per 100,000. These deaths are 15 fewer than in the previous year, but the death-rate is the same. Of these deaths 307 were among males, and 287 among females. The male death-rate was 13 per 100,000, and the female 11. In the larger burghs taken collectively the death-rate from this cause was 15, in the smaller burghs 11, and in the county districts 9. Compared with the rates of the previous year that of the larger burghs shows an increase of 1, but those of the smaller burghs and of the county districts both show a decrease of 1. In the larger burghs taken individually the death-rate from this cause varied from 25 per 100,000 in Hamilton, 24 in Falkirk and in Perth, and 23 in Coatbridge, to 3 in Kirkcaldy and in Kilmarnock, 7 in Dunfermline and 8 in Ayr. (*Tables 30-40.*)

Comparison with the figures of recent years shows that the number of deaths from tuberculous meningitis is decreasing. In the years 1911 to 1914 this number was constantly over 1000, it fell below 900 in 1917, below 700 in 1919, and in the years 1920 and 1922 has been less than 600. Of the 594 persons dying from this cause 403 were children aged under 5, 119 were children aged between 5 and 15, and only 15 were persons aged 35 and over. (*Tables 30 and 37.*)

Deaths from tuberculosis of the intestines and peritoneum numbered 538, and equalled a death-rate of 11 per 100,000. These deaths are 45 more than in the previous year, and 13 more than in 1920, but are fewer than in other recent years. In the years 1911 to 1914 they constantly numbered more than 800, and in the years 1915 to 1918 between 700 and 800. In the larger burghs taken individually the death-rate from tuberculosis of the intestines and peritoneum varied from 25 in Hamilton, and 21 in Greenock and in Motherwell and Wishaw, to 6 in Aberdeen, in Ayr and in Perth. (*Tables 36 and 37.*)

Malignant Disease.—Deaths from cancer and other forms of malignant disease numbered 6133, and the corresponding death-rate is 125 per 100,000. Both this number and this rate are the highest yet recorded in Scotland. The deaths registered during the year from cancer numbered 171 more than in the previous year, 453 more than the mean of the numbers in the five preceding years, and 641 more than the mean of those of the preceding ten years. The cancer death-rate of the year, 125 per 100,000, is 3 more than that of the previous year, 12 more than the mean of those of the ten years

1911 to 1920, and 32 more than the mean of those of the ten years 1901 to 1910. Previous to 1878 the cancer death-rate was constantly less than 50 per 100,000, in 1878 it was more than 50, in 1886 it rose to 60, in 1894 to more than 70, in 1898 to 80, in 1905 to over 90, in 1909 to over 100, in 1912 to 110, and in 1921 to over 120. The cancer deaths of the year are 5·3 times as many as those of 1861, 4·3 times as many as those of 1871, 3·2 times as many as those of 1881, 2·3 times as many as those of 1891, 1·7 times as many as those of 1901, and 1·2 times as many as those of 1911. Up to the year 1912 phthisis deaths constantly outnumbered cancer deaths, but since 1913 the reverse has been the case, the cancer deaths being the most numerous. Cancer deaths now outnumber phthisis deaths by 2072, or by 33·3 per cent. Fifty years ago (in 1872) phthisis deaths outnumbered cancer deaths by 7156, or by 82·1 per cent. (*Table 39.*)

Of the 6133 deaths from cancer 2617 occurred among males and 3516 among females, the male death-rate from this cause being 111 per 100,000, and the female 138. Compared with the previous year the male death-rate shows an increase of 5, and the female an increase of 1. (*Tables 33 and 34.*)

In the larger burghs taken collectively this death-rate was 133 per 100,000, in the smaller burghs 128, and in the county districts 112. In the previous year these three death-rates were 129, 127 and 108, and thus each shows an increase, the increase of the larger burgh rate being 4, of the smaller burgh rate 1, and of the county district rate 4. The age-group death-rates from cancer ranged from 1257 at ages 85 and upwards, 1101 at ages 75 to 84, 830 at ages 65 to 74, and 483 at ages 55 to 64, to less than 5 in all age-groups under age 24. (*Tables 31 and 34.*)

Of the 6133 deaths from malignant disease 4084 were ascribed to carcinoma, 269 to sarcoma, and 1780 to other or unspecified forms of malignant disease. In the previous year these three figures were 3870, 274 and 1818.

The most frequent sites of fatal malignant disease among males were stomach (714), intestine (428), liver (230), rectum (206), tongue (113), and œsophagus (94); and the most frequent sites among females were stomach (696), breast (539), intestine (534), uterus (466), liver (343), and rectum (164). Grouping together those of the stomach, œsophagus, intestine, rectum and liver it is found that deaths from cancer in these situations among males numbered 1672, and among females 1793. In the previous year these numbers were 1595 and 1735, and thus such deaths among males show an increase of 77, and among females an increase of 58. Deaths from cancer of the uterus and breast among females collectively numbered 1005, which is 14 fewer than in the previous year. (*Table 42.*)

Syphilis.—Syphilis was the stated cause of death in 162 instances. This number is 37 less than that of the previous year, 39 less than the mean of those of the five preceding years, and 39 less than the mean of those of the ten preceding years. These deaths equal a death-rate of 3 per 100,000, which is 1 less than in the previous year, and 1 less than the mean of those of the ten years 1911 to 1920. In addition to these 162 deaths directly attributed to syphilis, there were 447 deaths attributed to parasyphilitic disease, including 232 from general paralysis of the insane, 126 from aneurysm, and 89

from locomotor ataxy. These deaths collectively number 16 fewer than in the previous year; those from general paralysis being 16 fewer, while those from locomotor ataxy are 13 more. (*Page 4.*)

Other General Diseases.—The foregoing causes of death are of a general rather than of a local anatomical distribution, and in addition to them deaths grouped as general diseases included, among others, 189 from chronic rheumatism, osteo-arthritis or gout, 166 from rheumatic fever, 528 from diabetes, and 496 from anæmia and chlorosis, of which 436 were attributed to pernicious anæmia. Compared with the number in the previous year deaths from rheumatism, gout and osteo-arthritis were 21 fewer, and those from acute rheumatism 18 fewer, but those from diabetes were 28 more, from pernicious anæmia 18 more, and from other forms of anæmia and chlorosis 15 more. (*Page 4.*)

Diseases of the Ductless Glands.—Deaths attributed to these diseases during the year numbered 274, of which 128 were attributed to diseases of the thyroid and parathyroid, including 76 from exophthalmic goitre, 31 to diseases of the suprarenal capsules, including Addison's disease, 9 to diseases of the spleen, 5 to diseases of the thymus, 4 to diseases of the pituitary gland, and 97 to diseases of the lymphatic glands, including 39 from Hodgkin's disease. Compared with the figures of the previous year deaths from diseases of the thyroid and parathyroid are 20 more, from diseases of the thymus 4 more, from diseases of the pituitary gland 1 more, and from diseases of the lymphatic glands 1 more, but those from diseases of the spleen are of the same number, while those from diseases of the suprarenal capsules are 10 fewer. In this and in the previous year deaths from exophthalmic goitre were of the same number, but deaths from Hodgkin's disease were 6 fewer in this than in that year. (*Page 5.*)

Chronic Poisonings.—Deaths attributed to chronic poisonings in all numbered 97, 94 being attributed to alcoholism, 2 to plumbism, and 1 to other organic poisoning. In the previous year deaths from alcoholism numbered 86, and from plumbism 3. Of the 94 deaths from alcoholism, 16 were returned as caused by delirium tremens, 36 by acute alcoholism, and 42 by chronic alcoholism. (*Page 5.*)

Diseases of the Nervous System.—Deaths from these causes in all numbered 8853, and included 75 from cerebral abscess and other inflammation of the brain, 141 from cerebral tumour, 584 from meningitis (other than tuberculous or cerebro-spinal), 457 from locomotor ataxy or other diseases of the spinal cord, 5808 from cerebral hæmorrhage, embolism and thrombosis, and including those certified as due to apoplexy or hemiplegia, 383 from insanity, of which 232 were ascribed to general paralysis of the insane, 203 from epilepsy, and 585 from convulsions, of which 580 were among children under five years of age. These deaths collectively numbered 250 more than in the previous year. Compared with 1921 an increase of 259 is found in the number of deaths from cerebral hæmorrhage, embolism and thrombosis, and one of 42 in the number of deaths from convulsions, but a decrease of 48 is found in the number of deaths from locomotor ataxy and other diseases of the spinal cord. (*Page 5.*)

Deaths attributed to diseases of the eye numbered 4, and those attributed to diseases of the ear, including diseases of the mastoid,

numbered 150. The former are 1 more, but the latter are 20 fewer, than in the previous year. (*Page 6.*)

Diseases of the Circulatory System.—Deaths from these causes collectively number 7784, which number is 189 in excess of that of the previous year. Of these 7784 deaths, 6727 were attributed to diseases of the heart, 885 to diseases of the arteries, 42 to diseases of the veins, 89 to embolism and thrombosis (other than cerebral), and 24 to diseases of the lymphatic system (other than leucæmia and Hodgkin's disease), and included 10 deaths from status lymphaticus. Compared with the number in the previous year, deaths from heart disease are 165 more, from diseases of the arteries 49 more, and from diseases of the veins 1 more, but those from embolism and thrombosis are 10 fewer, and from diseases of the lymphatic system 3 fewer. (*Page 6.*)

Diseases of the Respiratory System.—Deaths from diseases of the respiratory system (other than phthisis and exclusive of those associated with influenza) collectively numbered 12,780, which number is 2976 in excess of that of the previous year. Of these deaths 19 were attributed to diseases of the nose and 124 to diseases of the larynx, of which 69 were attributed to laryngitis and 14 to croup. Of them 5127 were attributed to bronchitis, 3793 to broncho-pneumonia, 2824 to other forms of pneumonia, including lobar pneumonia, 272 to pleurisy, and 621 to other respiratory diseases, inclusive of 438 attributed to congestion of the lungs and 85 to asthma. Compared with the number in the previous year deaths from bronchitis are 1156 more, from broncho-pneumonia 1544 more, from other forms of pneumonia 133 more, and from pleurisy 30 more. (*Page 6.*)

Bronchitis. — Deaths from bronchitis, including those from bronchitis associated with influenza, in all numbered 5730, and equalled a death-rate of 117 per 100,000. This number is 1595 more than that of the previous year, 800 more than the mean of those of the preceding five years, and 749 more than the mean of those of the preceding ten years. This death-rate is 32 more than that of the previous year, 12 more than the mean of those of the decade 1911 to 1920, and 1 more than the mean of those of the decade 1901 to 1910.

Exclusive of those associated with influenza, deaths from bronchitis numbered 5127, of which 2535 were of males and 2592 of females, the male death-rate from this cause being 107, and the female 102 per 100,000. In the larger burghs this death-rate was 126, in the smaller burghs 94, and in the county districts 78. In the previous year these three rates were 97, 73 and 64 respectively. In the larger burghs taken individually the death-rate from bronchitis ranged from 192 in Coatbridge, 145 in Glasgow, 145 in Dundee, and 136 in Greenock, to 62 in Clydebank, 64 in Dunfermline, 75 in Hamilton, and 80 in Falkirk. Of deaths from bronchitis (exclusive of those associated with influenza) 1170 or 22·8 per cent. were among children of less than 5 years old, 1352 or 26·4 per cent. were among persons of more than 5 but less than 65 years old, and 2605 or 50·8 per cent. were among persons aged 65 and over. The death-rate from bronchitis in age-group 35 and over was 26·7 per 1000; in age-group 75 to 84, 14·0; and in age-group 65 to 74, 6·1. In age-

group under 1 this death-rate was 7·7, and in age-group 1 to 4, 0·8. In age-group 10 to 14 it was 2 per 100,000, and in age-group 15 to 24 it was 3. The months of the year in which deaths from bronchitis were most numerous were January (1275), February (798), March (550), and those in which these deaths were least numerous were July (162), August (174) and September (178). In January and February, the months in which these deaths were most numerous, influenza was epidemic. (*Tables 30-40, and page 42.*)

Pneumonia.—The total number of deaths attributed to pneumonia was 8265, this number including 1648 deaths from pneumonia associated with influenza. These deaths numbered 2872 more than in the previous year, and 978 more than the mean of the numbers of the preceding ten years, but 310 less than the mean of those of the preceding five years. Collectively these deaths equalled a death-rate of 169 per 100,000. This rate is 59 more than that of the previous year, 16 more than the mean of those of the ten years 1911 to 1920, and 24 more than the mean of those of the ten years 1901 to 1910. (*Tables 39 and 40.*)

Deaths from pneumonia, exclusive of those associated with influenza, numbered 6617, and equalled a death-rate of 135 per 100,000. The male death-rate from this cause was 157, and the female rate 115. In the larger burghs taken collectively this death-rate was 183, in the smaller burghs 95, and in the county districts 86. In the previous year these three rates were 128, 78 and 74 respectively. In the larger burghs taken individually the pneumonia death-rate varied from 238 in Glasgow, 225 in Coatbridge, 221 in Greenock, 195 in Falkirk, and 183 in Hamilton, to 62 in Dunfermline, 88 in Kirkcaldy, and 111 in Ayr and in Perth. Of the 6617 deaths included in this group 3793 were certified as due to broncho-pneumonia and 2824 as due to lobar or other form of pneumonia. In the previous year those from broncho-pneumonia numbered 2249 and those from other forms of pneumonia 2691. Of these 6617 deaths, 3697 or 55·9 per cent. were of children of less than 5 years of age, 1814 or 27·4 per cent. were of persons aged 5 to 64, and 1106 or 16·7 per cent. were persons aged 65 and over. The age-groups showing the highest pneumonia death-rate were age-groups under 1, over 85, 75 to 84, and 1 to 4, where the death-rates were 1648, 732, 560 and 507 per 100,000 respectively. (*Tables 30-40.*)

Diseases of the Digestive System.—Deaths from diseases of the digestive system in all numbered 3882. In the previous year they numbered 4674, and thus those of this year show a decrease of 792. These 3882 deaths include 122 from diseases of the mouth, tonsils, pharynx and œsophagus, 777 from diseases of the stomach, 2413 from diseases of the intestines, 440 from diseases of the liver, and 130 others. The 122 deaths from diseases of the mouth, tonsils, pharynx and œsophagus included 88 from diseases of the tonsils and pharynx, and 26 from diseases of the mouth; these deaths collectively number 23 more than in the previous year. Deaths from diseases of the stomach collectively numbered 117 fewer than in the previous year; they included 323 ascribed to ulcer of the stomach. Deaths from diseases of the intestines collectively numbered 692 fewer than in the previous year; they included 143 attributed to ulcer of the duodenum, 38 to other ulceration of the intestines, 892 to diarrhœa

among children of under 2 years old, 344 from diarrhoea among persons of over that age, 458 from appendicitis, 171 from hernia, and 307 from intestinal obstruction; compared with the number in the previous year deaths from the diarrhoeas of childhood numbered 635 fewer, from appendicitis 41 fewer, and from hernia 60 fewer. The 440 deaths from diseases of the liver included 145 from cirrhosis, and 128 from gallstones, the former being 26 fewer, but the latter 23 more, than in the previous year. (*Page 7.*)

Deaths from all forms of diarrhoea and including those certified as due to enteritis, gastro-enteritis, and dysentery numbered 1244; this number is 747 less than that of the previous year, 513 less than the mean of the preceding five years, and 825 less than the mean of those of the preceding ten years. The death-rate from these causes taken collectively was 25 per 100,000, which rate is 16 less than that of the previous year, 20 less than the mean of those of the ten years 1911 to 1920, and 39 less than the mean of those of the ten years 1901 to 1910. (*Tables 39 and 40.*)

Diseases of the Genito-Urinary System.—Deaths attributed to these diseases collectively numbered 2813, which is 75 more than in the previous year. Of these, 2091 were attributed to diseases of the kidney, 262 to diseases of the bladder and urethra, 248 to diseases of the male reproductive organs, and 211 to those of the female reproductive organs. Compared with the number in the previous year deaths from diseases of the kidney are 76 more, from diseases of the bladder and urethra 7 more, and those from diseases of the female reproductive organs 7 more, but those from diseases of the male reproductive organs are 16 fewer. (*Page 7.*)

Diseases and Accidents of Pregnancy and Parturition.—Deaths from these causes during the year collectively numbered 759 as against 786 in the previous year, a decrease of 27. Of these deaths 127 were ascribed to diseases and accidents of pregnancy, 152 to accidents of parturition, 478 to diseases of the puerperium, and 2 to puerperal diseases of the breast. Compared with the number in the previous year deaths from diseases and accidents of pregnancy numbered 13 more, but those from accidents of parturition numbered 19 fewer, and those from diseases of the puerperium 21 fewer, while those from puerperal diseases of the breast are of the same number. Of the 127 deaths from diseases and accidents of pregnancy 56 were attributed to abortion or miscarriage, 20 to uncontrollable vomiting, and 9 to ectopic gestation. Of the 152 deaths from accidents of parturition 99 were attributed to puerperal hæmorrhage. Of the 478 deaths from puerperal diseases 228 were attributed to puerperal sepsis, 122 to the albuminuria of pregnancy and eclampsia, and 40 to phlegmasia alba dolens or embolism. The births registered during the year numbered 115,085, and, as the deaths from diseases and accidents of pregnancy and parturition collectively numbered 759, they equalled a death-rate of 6·6 per thousand births. This death-rate is 0·2 more than in 1921, 0·4 more than in 1920, and 0·4 more than in 1919, but is 0·4 less than in 1918. In the larger burghs taken collectively this rate was 6·8, in the smaller burghs 6·2, and in the county districts 6·5. In the previous year these three rates were 6·4, 6·7 and 6·2 respectively, that in the larger burghs now being

0·4 more, and that in the county districts 0·3 more than in 1921, while that in the smaller burghs is 0·5 less. In the larger burghs taken individually this rate ranged from 11·7 in Clydebank, 9·8 in Greenock, 8·6 in Ayr, 8·5 in Dundee, and 7·8 in Coatbridge, to 3·3 in Kirkcaldy, 3·6 in Falkirk, and 3·8 in Edinburgh. In Glasgow this rate was 7·6, and in Aberdeen 6·8. (*Table 41 and page 7.*)

Diseases of the Skin and Cellular Tissue.—Deaths from these causes collectively numbered 528, and are 49 fewer than in the previous year. Of these deaths 243 were attributed to gangrene, 219 being caused by senile gangrene, 5 by cancrum oris, and 19 by other forms of gangrene. (*Page 7.*)

Diseases of Organs of Locomotion.—Deaths from these causes in all numbered 117, and are 5 fewer than in the previous year. Of these deaths 92 were attributed to diseases of bones (exclusive of those of the mastoid), and 23 to diseases of joints, the former being 2 more, and the latter 2 fewer than in the previous year. (*Page 8.*)

Malformations.—Deaths attributed to malformations in all numbered 514, which is 19 more than in the previous year. Of those dying from these causes 276 were males and 238 were females. Of them 454 were children of less than one year old, and 34 were children of more than one but less than five years old. Compared with the number in the previous year deaths of males from these causes are 13 more, and those of females are 6 more. Deaths of children of under one from these causes are 15 more, but those of children of more than one but less than five are 1 fewer. (*Page 8.*)

Diseases Peculiar to Early Infancy.—Deaths from these causes collectively numbered 4128, which is 475 fewer than in the previous year. Of these 4128 deaths, 2180 were attributed to premature birth, and 42 to injury at birth, the former number being 151 fewer, but the latter 17 more than in the previous year. (*Page 8.*)

Old Age.—Deaths attributed to senility or to senile dementia in all numbered 3973. In the previous year these deaths numbered 4055, and thus those of this year show a decrease of 82. (*Page 8.*)

Violence.—Deaths attributed to violent causes in all numbered 2444. This number is 258 less than in the previous year, 444 less than the mean of those of the preceding five years, and 597 less than the mean of those of the preceding ten years. It is the smallest number of deaths attributed to violent causes in any year since 1886, when these deaths numbered the same—*i.e.* 2444. The annual death-rate from these causes is 50 per 100,000. This rate is 5 less than that of the previous year, 14 less than the mean of those of the ten years 1911 to 1920, and 16 less than the mean of those of the ten years 1901 to 1910. This is the lowest Scottish death-rate from violence yet recorded, the previous lowest being 55 in the year 1921, and 58 in each of the two years 1909 and 1910. Deaths from violence among males numbered 1745, and among females 699, the equivalent death-rate among males being 74, and among females 27. In the larger burghs this death-rate was 52, in the smaller burghs 49, and in the county districts 48. In the previous year these three rates were 56, 48 and 58 respectively. In the larger burghs taken individually the death-rate from violent causes varied from 67 in Dundee, 63 in Kilmarnock, 54 in Glasgow, 52 in Edinburgh, and 50 in Aberdeen and in Motherwell and Wishaw,

to 31 in Paisley, 37 in Ayr, and 38 in Greenock and in Clydebank. (*Tables 30-40.*)

Of the 2444 deaths from violence 276 were attributed to suicide, 2132 to accident, 18 to homicide and 18 to war casualties. Deaths from suicide numbered 3 more than in the previous year, but deaths from homicide are of the same number, while deaths from war casualties are 7 fewer, and those from accidental causes 254 fewer. Of the deaths from suicide 198 were of males and 78 of females, the former being 10 fewer, but the latter 13 more than in the previous year. Of deaths by homicide 4 were of males and 14 of females, the former being 3 fewer, but the latter 3 more than in the previous year. Of those from accident 1525 were of males and 607 of females, the former being 182 and the latter 72 fewer than in the previous year. (*Pages 8 and 18.*)

Of the 2132 deaths from accidental causes 341 were by drowning, 312 by burns and scalds, 196 by falls, and 118 by poisoning, these last including 17 by food poisoning, 80 by exposure to poisonous vapours, and 21 others. Deaths by drowning numbered 89 fewer than in the previous year, those by burns 9 fewer, and those by falls 32 fewer, but those by poisoning numbered 37 more, this last increase being fully accounted for by deaths from exposure to poisonous vapours, which numbered 80 this year as compared with 39 in the previous year. (*Page 8.*)

Deaths due to fatal accidents in coal and other mines numbered 156, on railways 98, with motor cars 213, with horses or horse-drawn vehicles 19, and with tram cars 20, each of these five numbers showing a decrease with the exception of that relative to fatal accidents in coal and other mines, which show an increase of 60. (*Page 8.*)

Deaths of children of less than one year old by overlaying or suffocation otherwise numbered 71, which is 5 less than in the previous year. (*Page 8.*)

Of the 21 deaths from accidental poisoning, 3 were attributed to arsenic, 2 each to paraldehyde, lysol, potassium cyanide, rat poisoning and carbolic, and 1 each to wintergreen liniment, wild berries, hydrochloric acid, chloral hydrate, kharsivan, laudanum, methylated spirits, and ammonia. (*Table 44.*)

Of the 80 deaths from accidental exposure to poisonous vapours, 74 were attributed to exposure to coal gas, 3 to exposure to carbon monoxide, 2 to exposure to carbon dioxide, and 1 to exposure to gases from smouldering blaes bing. The number of deaths from accidental coal gas poisoning is higher in this than in previous years. In 1921, 1920, 1919 and 1918 they numbered 35, 32, 32 and 21 respectively. (*Table 44.*)

In addition to the 80 deaths from accidental exposure to poisonous vapours during the year, there were 81 cases in which death occurred during or after the administration of an anæsthetic for therapeutic purposes, and of which the anæsthetic may or may not have been a contributory cause. In the previous year these deaths numbered 106, in 1920 they numbered 71, and in 1919 they numbered 43. In these 81 cases the anæsthetic used was chloroform in 54 instances, chloroform and ether in 17, ether in 3, and cocaine in 2. A mixture of chloroform ether and cocaine was the anæsthetic in one case, a mixture of cocaine and adrenalin in one case, codrenin in one, ethyl chloride in one, and stovaine in one. (*Table 44.*)

The 276 deaths by suicide included 66 by cut-throat or other cutting and stabbing, 68 by hanging, 80 by poisoning, 31 by drowning, 17 by gunshot, 10 by precipitation, and 3 on railways. Compared with the number in the previous year, suicidal deaths by poisoning are 30 more and by drowning 9 more, but those on railways are of the same number, while those by hanging and precipitation are 1 fewer, those by gunshot 4 fewer, and those by cut-throat 31 fewer. (*Table 43.*)

Of the 80 suicidal deaths by poisoning 62 were by coal gas, 4 by lysol, 2 each by potassium cyanide, chloroform and carbolic acid, and 1 each by sulphuric acid, carbon monoxide, rat paste, formaldehyde, hydrochloric acid, phosphorus and sheep dip, and 1 of which the cause was not stated. The total deaths of the year from coal gas poisoning, accidental as well as suicidal, numbered 136. In 1921 they numbered 66, in 1920 61, in 1919 50, and in 1918 39; in the ten years 1911 to 1920 they averaged 32. (*Table 44.*)

Relative Frequency of Causes of Death.—The following tabular statement shows in order of frequency those causes of death which were, during the year, the prescribed cause of at least one per cent. of the total deaths of the year, the figures given being those of the actual number of deaths, and the percentage of the total deaths caused by each.

<i>Causes of Death.</i>	1922.*		1921.	
	<i>Number.</i>	<i>Per Cent. of Total.</i>	<i>Number.</i>	<i>Per Cent. of Total.</i>
Heart Disease	6,727	9·23	6,562	9·92
Pneumonia	6,617	9·08	4,940	7·46
Malignant Tumours	6,133	8·41	5,962	9·00
Apoplexy	5,808	7·97	5,549	8·38
Bronchitis	5,127	7·03	3,971	6·00
Diseases of Early Infancy	4,642	6·37	5,098	7·70
Tuberculosis of Respiratory System	4,061	5·57	3,970	6·00
Influenza	3,706	5·08	1,330	2·01
Measles	2,695	3·70	269	0·41
Violence	2,444	3·35	2,702	4·08
Nephritis	1,967	2·70	1,906	2·88
Whooping Cough	1,408	1·93	1,478	2·23
Other Diseases of Respiratory System	1,036	1·42	893	1·35
Diarrhoea (under 2 years of age)	892	1·22	1,527	2·31
Diseases of Arteries	885	1·21	836	1·26
	<u>54,148</u>	<u>74·27</u>	<u>47,389</u>	<u>71·57</u>

* Tables 30 and 32.

The foregoing list includes 54,148 deaths, and that is 74·27 per cent. of the total.

The percentage of the total deaths attributable to all forms of tuberculous disease was 7·98, of which 5·57 were due to tuberculosis of the respiratory system, 0·81 to tuberculous meningitis, 0·74 to tuberculosis of the intestines and peritoneum, and 0·86 to other tuberculous disease.

A comparison between this table and the corresponding table of the Report dealing with 1921 shows that in 1922 the diseases which were markedly more frequent in this than in that year as a cause of death were influenza, pneumonia, bronchitis and measles. In this year deaths from influenza constituted 5·08 per cent. of the total as against 2·01 in 1921, pneumonia deaths constituted 9·08 per cent. as against 7·46, bronchitis deaths constituted 7·03 per cent. as against 6·00, and measles deaths constituted 3·70 per cent. as against 0·41.

Infant Deaths.—Deaths of children of less than one year old in

all numbered 11,664, and as already stated equalled an infantile mortality rate of 101·4 per thousand registered births. Of these deaths, 6677 were males and 4987 were females. Of these children, 6271 were less than three months old, 1805 were three but less than six months old, 1701 were six but less than nine months old, and 1887 were nine months but less than twelve months old. Compared with the number in the previous year, that of children of less than three months old is 431 less, but that of children of three but less than six months old is 9 more, of children of six but less than nine months old 315 more, and of children of nine but less than twelve months old 641 more. Deaths of children of less than one month old numbered 4531, and constituted 38·8 per cent. of the total deaths under one year; in the previous year these deaths numbered 4916, and constituted 44·2 per cent. of the total. Of the 4531 deaths of children of less than 1 month old 2788 were of children of less than one week old, and 1743 of more than one week but of less than one month old, the former constituting 23·9 per cent. and the latter 14·9 per cent. of the total deaths among children of less than one year old. (*Tables 45 to 48.*)

The most frequent causes of death among infants during the year, the number of deaths caused by each, and the percentage of the total infantile deaths of the year caused by them, were:—premature birth 2180 or 18·7 per cent., pneumonia (all forms) 1863 or 16·0 per cent., bronchitis 871 or 7·5 per cent., congenital debility 1649 or 14·1 per cent., diarrhoea 731 or 6·3 per cent., measles 693 or 5·9 per cent., whooping-cough 604 or 5·2 per cent., congenital malformations 454 or 3·9 per cent., and convulsions 453 or 3·9 per cent. Compared with the number in the previous year deaths from premature birth debility are 151 fewer, from congenital debility 257 fewer, from diarrhoea 550 fewer, and from whooping-cough 121 fewer, but those from pneumonia are 641 more, from bronchitis 236 more, from measles 620 more, from congenital malformations 15 more, and from convulsions 50 more. (*Table 45.*)

Deaths among infants from all forms of tuberculous disease numbered 231, and included 20 from pulmonary tuberculosis, 123 from tuberculous meningitis, 57 from tuberculosis of the intestines and peritoneum, and 31 others. In the previous year these deaths collectively numbered 267. (*Page 4.*)

Deaths among infants from all forms of meningitis, encephalitis and convulsions, taken collectively, numbered 839; in the previous year they numbered 806, in 1920 they numbered 983, and in 1919 they numbered 857. These 839 deaths included 123 from tuberculous meningitis, 32 from cerebro-spinal meningitis, 6 from posterior basal meningitis, 214 from other forms of meningitis, 3 from encephalitis lethargica, 8 from other forms of encephalitis, and 453 from convulsions. (*Page 4.*)

Deaths among children of less than one month old in all numbered 4531, and of them 2042, or 45·1 per cent., were due to premature birth, 1084, or 23·9 per cent., to congenital debility, and 303, or 6·7 per cent., to congenital malformations. Deaths from these three causes collectively numbered 3429, and constituted 75·7 per cent. of the total deaths at that age. In the previous year these deaths numbered 3734, and this percentage was 75·9. (*Table 45.*)

APPENDIX I.

FIFTY-EIGHTH ANNUAL REPORT ON THE VACCINATION OF CHILDREN IN SCOTLAND (1921).

This Report deals more especially with the vaccination of the children whose births were registered during the year 1921, and who in ordinary course should have been vaccinated in that year or in 1922.

Children whose births were registered in 1921 numbered 123,216, but of these 9717 died before reaching the age of statutory vaccination, six months, and those surviving at that age numbered 113,499. The latter is the number which more especially falls to be accounted for here.

Of the 113,499 children surviving at the time of statutory vaccination, 70,890, or 62·5 per cent., were either certified as having been successfully vaccinated or reported to be insusceptible to vaccination by reason of previous (uncertified) vaccination; 34,098 were unvaccinated by reason of declaration of conscientious objection on the part of parents; 3049 were unvaccinated by reason of postponement of vaccination on medical grounds; and 1276 were unvaccinated by reason of constitutional insusceptibility, while the detail as to the vaccination of 4186 was unknown through the children having been removed from the district of registration or for other cause. (*Table 52.*)

The vaccinated children of the year numbered 70,890, of whom 70,497 were certified as successfully vaccinated, and 393 as insusceptible by reason of previous (uncertified) vaccination. These 70,890 children constituted 62·46 per cent. of the total surviving at the time for statutory vaccination. This percentage is 8·08 less than in the previous year 1920, but is higher than in each of the years 1912 to 1919. Previous to the time when the Vaccination (Scotland) Amendment Act, 1907, made the conscientious objection of parents a valid reason of avoiding statutory vaccination, more than 91 per cent. of the children born in Scotland who survived at the time of statutory vaccination were successfully vaccinated, and this percentage in the years 1865 to 1883 was constantly over 96, but subsequent to the passing of the Act this percentage has been uniformly less. It fell below 90 in 1907, below 60 in 1913, and attained a minimum of 54·5 in 1918. In 1920, a year in which there was an epidemic of smallpox in Glasgow, this percentage rose to 70·54, but, as has been stated, has again fallen, being 62·46 in 1921. (*Table 53.*)

The children reported to be surviving at the time of compulsory vaccination, but remaining unvaccinated, in all numbered 38,423.

and constituted 33·85 per cent. of the total. In the previous year this percentage was 25·55. (*Table 52.*)

Certificates of Constitutional Insusceptibility numbered 1276, which number is larger than all years since 1911. During the years 1912 to 1919 Certificates of Constitutional Insusceptibility ranged from 728 in 1914 to 329 in 1915, and averaged 471. In 1920 this number rose to 1015, and, as already stated, in 1921 shows a further rise to 1276. Children unvaccinated for this reason constituted 1·12 per cent. of the total children surviving at the time of compulsory vaccination. Relatively high rates of insusceptibility are returned from the counties of Peebles (2·3 per cent.), Wigtown (2·1 per cent.), Bute (2·0 per cent.), and Clackmannan (1·9 per cent.). In the larger burghs the highest rates of insusceptibility occurred in Glasgow (1·8 per cent.), Edinburgh (1·7 per cent.), and Perth (1·3 per cent.), while the lowest were in Dunfermline, Kirkcaldy and Ayr, in each of which towns this rate was 0·1 per cent. (*Page 2.*)

Children exempted from vaccination on account of parental conscientious objection numbered 34,098, and constituted 30·04 per cent. of the total children surviving at the time of statutory vaccination. This percentage is more than in the previous year, when it was 22·30, but is less than in each of the years 1914 to 1919. In 1918 37·20 per cent. of the surviving children were exempted from vaccination for this reason. In the counties the percentage of children unvaccinated by reason of the parental conscientious objection varied from 87·1 in Shetland, 54·7 in Orkney, 54·1 in Forfar, and 48·0 in Dumbarton, to 8·6 in Wigtown, 13·2 in Moray, 13·2 in Peebles, and 13·8 in Nairn. In the larger burghs this percentage varied from 64·9 in Dundee, 63·9 in Falkirk, 52·0 in Greenock, 51·3 in Clydebank, and 48·5 in Hamilton, to 9·4 in Aberdeen, 14·7 in Ayr, 17·3 in Edinburgh, and 21·1 in Glasgow. In 18 of the less populous registration districts all children surviving at the time of statutory vaccination were exempted from this cause; of these districts 10 are in Shetland, and 2 each in Orkney, Sutherland, and Ross and Cromarty. Since the passing of the Amending Act of 1907 the total number of children in Scotland exempted from vaccination by reason of the conscientious objection of the parents is 445,880. (*Table 52.*)

Children whose births were registered during 1921, and who at the end of 1922 were still unvaccinated by reason of postponement on medical grounds, numbered 3049, and constituted 2·69 per cent. of the total surviving children at the time of statutory vaccination. This percentage is somewhat higher than in the years 1919 and 1920, but lower than in the years 1917 and 1918. (*Table 52.*)

Children whose vaccination was unaccounted for, whether through removal from the district of registration or otherwise, numbered 4186, and constituted 3·69 per cent. of the total surviving at the time of statutory vaccination. In 1920 this number was 4934 and this percentage 3·91, compared with which both the number and the percentage of this year show improvement. (*Table 52.*)

APPENDIX II.

ADDITIONAL STATISTICS REGARDING MARRIAGES REGISTERED IN SCOTLAND DURING THE YEAR 1921.

A statement regarding marriages registered in Scotland during the year 1921 was incorporated in the Sixty-seventh Annual Report of the Registrar-General, that dealing with the detailed statistics of the registered births and deaths of that year, but as full details of the registered marriages were not available at the time when the Report was prepared, the statement then made is now supplemented by a more detailed one.

The statement of marriage statistics relative to the year 1921 already published dealt only with the numbers registered, and with marriage-rates, while in this additional statement facts regarding the method of proclamation, the church of celebration, ages and conjugal conditions of those marrying, and the methods of signing the marriage schedules, by mark or writing, are included. In the Sixty-seventh Annual Report it was stated that the marriages registered numbered 39,273, but by a complete examination of the registers this number is now found to be 39,243, the original figure having been overstated by 30. This small correction does not materially affect any of the rates published in the Sixty-seventh Annual Report.

The number of marriages registered in Scotland during the year 1921, 39,243, and the marriage-rate of the year, 8·04 per thousand, are both large. Both are less than in the years 1919 and 1920, but both are more than in all other previous years (*Tables 1 and 2.*)

Regular and Irregular Marriages.—Of the 33,243 marriages registered in Scotland during the year 33,108, or 84·38 per cent., were regular, *i.e.* solemnised by a minister of religion after proclamation by banns or proclamation by public notice at a registrar's office, while 6135, or 15·62 per cent., were irregular, *i.e.* contracted without proclamation and not solemnised by a minister of religion. The regular marriages registered during the year numbered 5798 less than in the previous year, but 2289 more than the mean of the numbers registered in the five preceding years, and 2773 more than the mean of the numbers registered in the previous ten years. The irregular marriages of the year numbered 1713 less than in the previous year, and 482 less than the mean of the numbers of the preceding five years, but 823 more than the mean of those of the preceding ten years. (*Table 9.*)

The irregular marriages registered outnumbered those of all preceding years with the exception of the years 1915, 1919, and 1920. From 1855 to 1870 these irregular marriages numbered less than 100 annually; in the decade 1871 to 1880 they averaged 263,

which average in the decade 1881 to 1890 rose to 650, and in the decade 1891 to 1900 to 1428. In the decade 1901 to 1910 the annual average was 2034, and in the decade 1911 to 1920 it was 5312. A maximum number of irregular marriages, 8351, occurred in the year 1919. The irregular marriages of the year constituted 15·62 per cent. of the total. This percentage is 1·16 less than in the previous year, and 3·34 less than in the year 1919; it is also less than in the years 1914 to 1918, but is higher than in all other previous years. Previous to the year 1899 irregular marriages in Scotland constituted less than 5 per cent. of the total, but in that year rose to 5 per cent. In 1908 this proportion exceeded 7 per cent., in 1913 it exceeded 9 per cent., and since 1914 it has been constantly 12 per cent. or more, attaining a maximum of 20·48 per cent. in 1915. (*Table 9.*)

Of the 6135 irregular marriages registered during the year 3099, or 50·5 per cent., were registered in Glasgow; 1532, or 25·0 per cent., in Edinburgh; 1154, or 18·8 per cent., in other burghs with populations of over 30,000, and 350, or 5·7 per cent., in the rest of Scotland. Compared with the figures in the previous year, irregular marriages registered in Glasgow numbered 1070, or 25·7 per cent., fewer, in Edinburgh 235, or 13·3 per cent., fewer, in other large burghs 185, or 13·8 per cent., fewer, and in the rest of Scotland 223, or 38·9 per cent., fewer. (*Table 11.*)

Of the total marriages of the year in the larger burghs, Edinburgh and Glasgow included, 24·3 per cent. were irregular, while in the rest of Scotland this percentage was 2·3. In these burghs taken individually it varied from 33·2 in Edinburgh, 28·1 in Glasgow, 28·0 in Dunfermline and 22·7 in Aberdeen, to 0·0 in Clydebank, 0·7 in Coatbridge, 3·1 in Paisley, 3·6 in Motherwell and Wishaw, and 3·9 in Hamilton. In the counties, burghs included, the percentage of the total marriages constituted by irregular marriages varied from 29·6 in Midlothian, 21·9 in Lanark, and 15·6 in Aberdeen, to 0·0 in

TABLE N.—Regular Marriages in Scotland in 1921, following Proclamation of Banns or Publication at Registrar's Office.

Church of Celebration.	Number.				Percentage of Total for each Church, etc.		
	Total.	Banns.	Publication.	Banns and Publication.	Banns.	Publication.	Banns and Publication.
Established Church . . .	15,976	13,447	2,193	336	84·2	13·7	2·1
United Free „ . . .	9,082	6,382	2,487	213	70·3	27·4	2·3
Free „ . . .	301	211	87	3	70·1	23·9	1·0

Jews . . .	87	11	76	—	12·6	87·4	—
All other Regular Marriages	587	293	280	14	49·9	47·7	2·4
All Regular Marriages	33,108	22,801	9,583	724	68·9	28·9	2·2

East Lothian, in Kinross, in Peebles, in Selkirk and in Sutherland. (*Table 11.*)

Of the 6135 irregular marriages registered during the year 3 were on production of Extract Decree of Declarator, and the remainder by Sheriff's Warrant. (*Table 11.*)

Method of Publication.—Regular marriages registered during the year numbered 33,108. Of them 22,801, or 68·9 per cent., were solemnised after proclamation by banns in respect of both parties, 9583, or 28·9 per cent., after proclamation by public notice at a registrar's office in respect of both parties, and 724, or 2·2 per cent., after proclamation by banns in respect of one party and by public notice in respect of the other. Marriages after proclamation by banns are 2915, or 11·3 per cent. fewer than in the previous year, those after proclamation by public notice in respect of both parties 2631, or 21·4 per cent. fewer, and those after proclamation by banns in respect of one party and public notice in respect of the other are 252, or 25·8 per cent. fewer. (*Table N.*)

Of the total marriages of the year, regular and irregular, 58·1 per cent. were celebrated after proclamation by banns; 24·4 per cent. after proclamation by public notice in respect of both parties; 1·9 per cent. after proclamation by banns in respect of one party and by public notice in respect of the other, and 15·6 per cent. were contracted without the statutory preliminaries. In the previous year these four percentages were 55·0, 26·1, 2·1 and 16·8, and thus of the four only that constituted by marriage after banns shows an increase, while the remaining three show decreases. (*Table 11.*)

In the larger burghs taken collectively regular marriages numbered 17,997 and constituted 75·7 per cent. of the total marriages registered in them. In the remainder of Scotland regular marriages numbered 15,111 and constituted 97·7 per cent. of the marriages there registered. Of the regular marriages celebrated in the larger burghs 56·4 per cent. were after proclamation by banns, 41·4 per cent. after public notice in respect of both parties, and 2·2 per cent. after proclamation by banns in respect of one party and by public notice in respect of the other. In the remainder of Scotland these three percentages were 83·6, 14·1 and 2·3, and comparison shows proclama-

TABLE O.—Regular and Irregular Marriages in 1921.

		Number.			Percentage of Total Marriages.		
		SCOTLAND.	Larger Burghs.	Other Districts.	SCOTLAND.	Larger Burghs.	Other Districts.

tion by banns to be relatively less frequent, and that by public notice to be more frequent in the larger burghs than in the remainder of Scotland. (*Table 11.*)

Of the total marriages of the year, 90 per cent. or more were celebrated after banns in respect of both parties in 12 counties, more than 80 per cent. but less than 90 per cent. in 9 counties, more than 70 per cent. but less than 80 per cent. in 5 counties, more than 60 per cent. but less than 70 per cent. in 4 counties, more than 50 per cent. but less than 60 per cent. in 1 county, and less than 50 per cent. in 2 counties. The counties in which this percentage was highest were Nairn (98·0), Peebles (97·9), Shetland (96·9), Berwick (96·8), Wigtown (94·8), Caithness (94·4), and Banff (93·5), and those in which it was lowest were Lanark (41·4), Midlothian (47·3), and Forfar (54·9). (*Table 11.*)

Of marriages celebrated according to the forms of the Church of Scotland 84·2 per cent. were after proclamation of banns, of the United Free Church 70·3 per cent., and of the Free Church 70·1 per cent. In the case of marriages in the Jewish Church this percentage was 12·6, and in the Roman Catholic Church 17·3. Marriages after proclamation by public notice were relatively most frequent in the Jewish Church (87·4 per cent.) and in the Roman Catholic Church (80·3 per cent.), and relatively least frequent in the Church of Scotland (13·7 per cent.) and in the United Free Church (27·4 per cent.). (*Table N.*)

Church of Celebration.—Of the 33,108 regular marriages registered during the year 15,976, or 48·3 per cent., were celebrated according to the rites of the Church of Scotland; 9082, or 27·4 per cent., according to those of the United Free Church; 301, or 0·9 per cent., according to those of the Free Church; 4220, or 12·8 per cent., according to those of the Roman Catholic Church; 1076, or 3·2 per cent., according to those of the Episcopal Church; and 2453, or 7·4 per cent., according to the rites of other religious denominations. Compared with the previous year Church of Scotland marriages number 2181 or 12·0 per cent. fewer; United Free Church marriages 1657 or 15·4 per cent. fewer; Free Church marriages 83 or 21·6 per cent. fewer; Roman Catholic Church marriages 1098 or 20·6 per cent. fewer; Episcopal Church marriages 270 or 20·1 per cent. fewer, and marriages according to the rites of other denominations 509 or 17·2 per cent. fewer. Marriages celebrated according to the rites of the three large presbyterian churches, the Church of Scotland, the United Free Church, and the Free Church, in all numbered 25,359, and constituted 76·6 per cent. of the total regular marriages of the year, and 64·6 per cent. of the total marriages of the year, regular and irregular included. (*Table O.*)

The counties in which marriages according to the rites of the Church of Scotland were relatively most numerous were Peebles, 78·7 per cent. of the total marriages (irregular marriages included), Kinross 75·9 per cent., Kincardine 71·8 per cent., Wigtown 71·3 per cent., Argyll 66·7 per cent., and Kirkcudbright 65·5 per cent. (*Table 12.*)

United Free Church marriages were relatively most numerous in the county of Orkney, 47·1 per cent., in Nairn 40·3 per cent., in Bute 39·8 per cent., and in Caithness 38·8 per cent. (*Table 12.*)

Free Church marriages constituted 28·3 per cent. of the total

marriages in Sutherland, 30·2 per cent. in Ross and Cromarty, and 11·9 in Inverness. In 17 counties none were registered. (*Table 12.*)

Roman Catholic Church marriages constituted 22·6 per cent. of the total in Dumbarton, 20·7 per cent. in Renfrew, 16·2 per cent. in Lanark, 14·9 per cent. in West Lothian, and 10·8 per cent. in Forfar. In Shetland, Orkney, and in Sutherland no marriages according to the rites of this Church were registered, and there was only one in each of the counties of Berwick, Caithness, Kinross, Peebles, and Ross and Cromarty. (*Table 12.*)

Marriages according to the rites of the Episcopal Church (*i.e.* Scottish Episcopal Church and Church of England) were relatively most frequent in the counties of Kincardine, Forfar, Clackmannan and Midlothian, where they constituted 7·8, 6·3, 5·4 and 4·8 per cent. respectively of the total registered. In the counties of Orkney, Peebles and Sutherland no Episcopal Church marriages were registered. (*Table 12.*)

In all 45 religious denominations were named in the marriage registers of the year. In the previous year this number was 46, and in the year 1919 it was 51. These 45 denominations include the 5 churches named above, and 4 others in which more than 100 marriages were celebrated, these latter four being Congregational Church (1075 marriages), Baptist Church (468 marriages), Wesleyan Methodist Church (236 marriages), and the Christian Brethren (115 marriages). Marriages according to the rites of the Jewish Church numbered 87, and according to those of the Primitive Methodists and the Free Presbyterian Church, 69. A full list of the 45 denominations is given in Table P.

25. Free Church of England . . .	8		
26. Church of God . . .	7	All Marriages . . .	39,243

Conjugal Condition of those Marrying.—Of the 39,243 men married during the year, 36,285, or 92·5 per cent., were bachelors, while 2958, or 7·5 per cent., were widowers. The bachelors marrying during the year numbered 6757, or 15·7 per cent. fewer than in the previous year, and widowers marrying numbered 750, or 20·2 per cent. fewer. Of the 39,243 women marrying during the year 36,640, or 93·4 per cent., were spinsters, while 2603, or 6·6 per cent., were widows. Spinsters marrying during the year numbered 6450, or 15·0 per cent. less than in the previous year, and widows marrying numbered 1057, or 28·6 per cent. less.

Of the 39,243 marriages registered, 34,620, or 88·2 per cent., were between bachelors and spinsters, 2020, or 5·2 per cent., between widowers and spinsters, 1665, or 4·2 per cent., between bachelors and widows, and 938, or 2·4 per cent., between widowers and widows. Compared with the number in the previous year marriages between bachelors and spinsters were 5998, or 14·8 per cent. fewer, between widowers and spinsters 452, or 18·3 per cent. fewer, between bachelors and widows 759, or 31·3 per cent. fewer, and between widowers and widows 298, or 24·1 per cent., fewer. (*Table 13.*)

In the previous three reports comment has been made regarding an increase found in the number of marriages between widowers and widows, and how that a maximum number of such marriages, 1375, was registered in 1919. These marriages during the year 1921 numbered 938, and this number, though markedly less than in 1919 and 1920, continues to be more than average. In the decade 1881 to 1890 marriages between widowers and widows averaged 787, in the decade 1891 to 1900 they averaged 801, and in the decade 1901 to 1910 they averaged 741, and in the six years 1911 to 1916 they averaged 813. (*Table 10.*)

Method of Signature.—Of the 39,243 men marrying during the year 103 signed the marriage schedule by mark and not in writing, while of the corresponding number of women 147 used the mark. Both these numbers are the smallest recorded. In the years 1855 to 1882 more than 5000 persons annually signed the schedules and registers by mark; in 1883 this number fell below 5000; in 1885 below 4000; in 1888 below 3000; in 1893 below 2000; in 1908

TABLE Q.—Ages of Persons Marrying who Signed by Mark in 1921.

below 1000; and in 1915 below 500. The total number using the mark this year was 250. In the previous year (1920) it was 371. Of the 103 marriages in which men signed by mark 75 were registered in the larger burghs, and 28 in the remainder of Scotland. Those in Glasgow numbered 42, and in the remainder of the county of Lanark 18. Of the marriages in which women signed by mark 110 were in the larger burghs, and 37 in the remainder of Scotland. Those registered in Glasgow numbered 78, and in the remainder of the county of Lanark 9. Of the 250 persons using the mark 77 were married irregularly; 70 according to the rites of the Roman Catholic Church; 57 according to those of the Church of Scotland; 19 according to those of the United Free Church, and 10 according to those of the Episcopal Church. (*Tables R. and 14.*)

Ages of those Marrying.—The average age of all persons marrying during the year was 27·93 years; that of all bridegrooms was 29·31 years, and that of all brides 26·55 years. Compared with the figure of the previous year (1920) the average age of all persons marrying was 0·08 less, of all men marrying 0·07 less, and of all women marrying 0·09 less. Compared with the average age of the year 1919 that of all persons marrying is 0·57 less, of all men marrying 0·67 less, and of all women marrying 0·47 less. (*Table S.*)

In the larger burghs the average age of all persons marrying was 28·06, and in the rest of Scotland 27·72, the former being 0·07, and the latter 0·11 less than in the previous year. In the larger burghs the average age at marriage of men was 29·40 and of women 26·72, the former being 0·08 and the latter 0·07 less than in the previous year, while these averages in the rest of Scotland were 29·17 and 26·28, the former being 0·07 and the latter 0·14 less than in the previous year. (*Tables 15 and 16.*)

The average age of all bachelors marrying was 28·0, of those marrying spinsters 27·7, and of those marrying widows 34·0.

TOTAL	83	127	20	103	147	250

Compared with the corresponding figures in the previous year the average age of bachelors marrying spinsters is 0·1 less, but that of bachelors marrying widows is 1·0 more. The average age at marriage of widowers marrying during the year was 45·6; of those marrying spinsters 44·1, and of those marrying widows 48·9; in the previous year these 3 averages were 44·6, 43·3 and 47·3, the average age of all widowers marrying being 1·0 more than in that year, that of widowers marrying spinsters was 0·8 more, and that of widowers marrying widows 1·6 more. The average age of all spinsters marrying during the year was 25·8, of those marrying bachelors 25·2, and of those marrying widowers 35·0; compared with the figure of the previous year that of all spinsters is 0·1 less, and that of spinsters marrying bachelors is 0·1 less, but that of spinsters marrying widowers is 0·5 more. The average age of all widows marrying during the year was 37·4, of those marrying bachelors 34·1, and of those marrying widowers 43·4; compared with the average of the previous year that of all widows is 1·5 more, of widows marrying bachelors 1·2 more, and of widows marrying widowers 1·6 more. (*Table S.*)

The average age of the bridegrooms exceeded that of the brides by 2·7 years. In the previous year (1920) this difference was 2·8 years. In the case of bachelors marrying spinsters the average age of the former was 2·5 more than that of the latter, but in the case of bachelors marrying widows the average age of the latter was 0·1 more than that of the former. In the case of widowers marrying spinsters the average age of the former exceeds that of the latter by 9·1 years, and in the case of widowers marrying widows the difference was 5·5 years. As in previous years the greatest average difference of age occurs when widowers marry spinsters, and the least difference occurs when bachelors marry widows. (*Table S.*)

In the counties, burghs included, the average age of men marrying during the year ranged from 34·28 in Sutherland, 33·96 in Shetland, 33·79 in Ross and Cromarty, 33·28 in Inverness, and

* Bachelors and Widowers taken collectively.

† Spinsters and Widows taken collectively.

32·91 in Argyll, to 26·84 in Kinross, 27·76 in Fife, 27·77 in West Lothian, 28·24 in Ayr, 28·43 in Stirling, 28·54 in Renfrew, 28·57 in Clackmannan, 28·77 in Selkirk, and 28·94 in Dumbarton. The average age at marriage among women ranged from 29·73 in Shetland, 29·51 in Ross and Cromarty, 28·73 in Sutherland, 28·57 in Inverness, and 28·55 in Argyll, to 24·53 in Kinross, 24·92 in West Lothian, 25·41 in Fife, 25·69 in Stirling, 25·78 in Clackmannan, 25·82 in Kincardine, and 25·83 in Nairn. (*Tables 15 and 16.*)

In the larger burghs taken individually the average age at marriage of men varied from 30·28 in Perth, 30·15 in Edinburgh, and 29·57 in Glasgow, to 27·57 in Hamilton, 27·68 in Kirkcaldy, 27·85 in Coatbridge, and 27·98 in Clydebank. In Dundee this average was 29·02, and in Aberdeen 29·25. In these burghs the average age at marriage of women varied from 27·67 in Perth, and 27·31 in Edinburgh, to 25·06 in Coatbridge, 25·15 in Hamilton, and 25·48 in Motherwell and Wishaw. In Dundee this average was 26·48, and in Aberdeen 26·46. (*Tables 15 and 16.*)

The youngest bridegrooms of the year were 4 aged 16, 54 aged 17, and 285 aged 18. In the previous year there were 4 aged 16, 52 aged 17, and 313 aged 18. With one exception, that of a bachelor aged 18 who married a widow aged 20, all the 343 bridegrooms of the year aged less than 19 married spinsters, of whom 229 were under 20, 101 were aged between 20 and 25, and 12 were aged 25 and upwards. The oldest bridegrooms of the year were 8 aged between 75 and 79, and 4 aged 80 and over; all these 12 bridegrooms were widowers, 3 of them married widows, and 9 of them married spinsters. (*Tables 19-23.*)

The youngest brides of the year were 2 aged 14, 4 aged 15, 83 aged 16, and 504 aged 17. All these except 5 married bachelors, and of them 150 married bridegrooms of under 20, 427 bridegrooms of between 20 and 30, and 16 bridegrooms of 30 and over, the oldest being one aged between 55 and 60. (*Tables 19-23.*)

APPENDIX III.

REPORT ON THE WEATHER OF SCOTLAND FOR THE YEAR ENDING 31ST DECEMBER 1922.

Supplied by the Meteorological Office, Edinburgh.

This report consists of a description of the weather for each month of 1922 and detailed statistics for 68 stations. In preparing the descriptive matter, additional sources of information have been utilised including numerous rainfall records and meteorological returns from The Northern Lighthouses.

January 1922.—The month was characterised by a low mean pressure; a slightly low mean temperature, with a low mean daily range; a somewhat high mean rainfall; and a large excess of easterly and south-easterly winds.

Disturbed conditions were much in evidence, and on 15th during the passage of a trough of low pressure across our Islands the barometer fell fully 1 in. At Edinburgh, at sea-level, pressure was above 30 in. on 4th and 5th, from 10th to 14th, and from 22nd to 24th; and the extremes were 30·42 in. on 12th and 28·96 in. on 15th.

Some considerable temperature fluctuations occurred. The 1st was nearly everywhere the mildest day of the month, with 57° at Aberdeen and elsewhere. On 3rd cold weather set in for a few days, and, later, around 18th very wintry conditions prevailed, with 8° at Eskdalemuir and West Linton on night of 17th–18th. Another incursion of cold around 24th was less severe in Scotland than in England. With short spells of comparatively high temperature the mean of the month in some districts differed but little from the normal.

Very heavy rains on 1st (3·27 in. at Leadhills) were followed by a short dry spell in eastern districts, whilst at places in the west precipitation occurred on every day from 1st to 21st. During the third and fourth weeks there was much snow, with some large amounts on 15th. In southern districts and towards north-east the month was a very wet one, with fully twice the normal in Wigtownshire and in some hilly parts of Aberdeenshire and Forfarshire; towards south-east aggregates differed little from the normal; whilst in the West Highlands there was a decided deficiency, and Fort William had only 57 per cent. of the normal. At Aberdeen the month was the wettest January since 1903. For Scotland as a whole the mean rainfall represented 131 per cent. of the normal, as compared with 158 per cent. for England and Wales and 126 per cent. for Ireland.

There was a great deal of very stormy weather, especially in

north and north-east. On 3rd a severe snowstorm developed in north-east, spreading southwards on 4th and 5th. Later, snow in some districts on 13th and 14th was followed by a widespread snowstorm of great severity on 15th, with further heavy falls on various days until nearly the end of the month.

Thunderstorms occurred in the extreme north on 3rd and 10th, and here and there between 18th and 20th.

The month was a very cloudy one in the north, whilst in south-east sunshine aggregates practically equalled the normal.

Aurora was rather widely observed on 8th and 18th.

February 1922.—The month was characterised by a low mean pressure; a mean temperature differing little from the normal, with a low mean daily range; a somewhat high mean rainfall; and a large excess of southerly and south-westerly winds.

On 4th and 5th there was a rapid recovery from rather disturbed conditions and pressure remained high until 12th, whilst during the second half of the month numerous secondary depressions exerted their influence. At Edinburgh, at sea-level, pressure was above 30 in. from 5th to 12th; and the extremes there were 30·36 in. on 10th and 28·97 in. on 21st.

After moderate temperatures until 3rd, rather cold weather set in over the southern half of Scotland, with 20° at Eskdalemuir on night of 10th-11th, and it is noteworthy that at this time the south of England was much colder than the north of Scotland. Thus, for the week ending 11th a mean temperature of 38°·1 at Aberdeen, compared with 34°·5 at London (Richmond) and 37°·2 at Jersey. Temperature remained somewhat low until 20th, with generally mild conditions thereafter and rather high day readings on 24th (60° at Gordon Castle).

There were moderate to rather heavy rains until 3rd; snow in most districts on 4th and 5th; and dry conditions from about 8th to 12th. During the third week precipitation was in general rather heavy, much of it consisting of snow, whilst later very moderate falls in the east contrasted with heavy rains in the West Highlands. Thus, at Fort William 2·75 in. on 24th was followed by about 1½ in. on 25th and nearly 2 in. on 28th. In the extreme north aggregates were below the normal, but in general there was a moderate to fairly large excess. Thus, Tongue had only 47 per cent. of the normal, but Fort William 144, Rothesay 165, and Ardwell (Wigtownshire) 180 per cent. At Dundee about half the month's total was accounted for from 2nd to 4th, whilst at Fort William (10·81 in.) 6·80 in. fell between 24th and 28th. For Scotland as a whole the mean rainfall represented 124 per cent. of the normal, as compared with 148 per cent. for England and Wales, and 138 per cent. for Ireland.

The weather was extremely stormy on 3rd and 4th, on 8th, on 24th and 25th, and on 28th. A snowstorm on 4th and 5th was most severe in eastern districts; whilst later falls on 14th and on 20th were more general. In the Central Highlands many roads were blocked. With heavy rains and melted snow the Tay and other rivers were in high flood at the end of the month.

Thunderstorms occurred here and there between 17th and 23rd; and rather widely from 26th to 28th.

The month was decidedly cloudy, and in general a large part of the month's sunshine was registered during the last week.

Aurora was observed rather widely on 1st, and here and there on 19th and 26th, and in Shetland on 12th, 13th, 14th, 18th, 26th and 28th.

March 1922.—The month was characterised by a slightly high mean pressure; a mean temperature practically equal to the normal, with a slightly low mean daily range; a low mean rainfall; and an excess of north-easterly winds.

An unsettled type of pressure distribution during the first week was followed by a spell of anticyclonic conditions, with a recurrence of a more unsettled type affecting mainly eastern districts towards the end of the month. At Edinburgh, at sea-level, pressure was above 30 in. from 10th to 23rd and on 28th and 29th; and the extremes there were 30·54 in. on 12th and 28·94 in. on 8th.

Until 17th or 18th temperature was above the normal, and for the week ending 18th the west of Scotland was conspicuous as the warmest region of our Islands excepting only the south-west of Ireland (62° at Colmonell and 61° at Ford on 14th). On the other hand the last two weeks were marked by very cold weather, with lowest readings on 23rd or during the last three days (15° at West Linton on 31st). Very generally mean temperatures for the month differed but little from the normal.

Moderate to heavy rain from 1st to 6th or 7th was followed by a spell of fine weather lasting until 18th or 19th and in west until 22nd, whilst during the last week there was moderate precipitation (snow, sleet or rain) on various days, though but little in west and south. In the west the greater part of the month's rainfall was accounted for between 1st and 7th, and at Edinburgh more than half of it on 4th and 5th. At Aberfoyle no rain, and at Fort William hardly any, fell from 8th to 22nd. At one or two points in north and east aggregates were slightly above the normal; but in general there was a moderate to very decided deficiency. Thus Grantown-on-Spey had 116 per cent. of the normal; but Dumfries 76, Fort William 64, Inveraray 54 and Colmonell only 48 per cent. In the driest areas, however, much smaller amounts were recorded in the very dry March of 1918. For Scotland as a whole the mean rainfall represented 76 per cent. of the normal, as compared with 103 for England and Wales and 72 per cent. for Ireland.

Snow fell in eastern and southern districts, in places heavily from 19th to 21st, and the month closed with very wintry weather and a good deal of snow, though much less than was experienced in the south of England at that time.

Thunderstorms occurred locally in west on 1st and 4th.

There were some very sunny days, and sunshine aggregates were high in the west, *e.g.*, 161 hours at Turnberry as compared with 93 hours at Aberdeen. During the week ending 18th, the west of Scotland and north-west of England were much the sunniest regions in our Islands.

Aurora was observed rather widely on each day from 1st to 5th, and at various points from 17th to 20th, and on 29th and 30th.

April 1922.—The month was characterised by a low mean pressure; an abnormally low mean temperature, with a mean daily range equal to the normal; a somewhat high mean rainfall; and an excess of north-westerly winds.

Pressure was relatively high over the Icelandic region until 14th, when a low-pressure system moved on a north-easterly track across our Islands accompanied by very stormy weather for two or three days. Towards the end of the month conditions were again unsettled. At Edinburgh, at sea-level, pressure was above 30 in. from 16th to 21st, and the extremes there were 30·57 in. on 18th and 28·98 in. on 15th.

The very cold type of weather which had set in about 20th March continued throughout April without any real break, and only for a day or two around 20th was temperature even moderately high. The maximum reported was only 63° (at Helensburgh on 20th) and at Edinburgh the highest reading was only 52°. In most districts the mean temperature of the month was much the same as that for the cold April of 1917. Lowest readings occurred very generally on 1st, with 11° at Braemar. Ground frost was very frequent,—at Renfrew on as many as 24 nights and at Dumfries on 22. The cold character of the month was equally well marked as regards both days and nights.

A great part of Scotland had a rainfall appreciably above the normal, and around the lower Spey valley there was an abnormally large excess. On the other hand there was an area of decided shortage in the West Highlands, and a moderate deficiency in parts of Fifeshire and Forfarshire, and at *e.g.* Glasgow. At Grantown-on-Spey (5·04 in. or 256 per cent. of the normal) the month was the wettest April on record, and the rainfall twice that at Fort William (2·54 in. or 57 per cent.),—a complete reversal of the normal relation between these two places. Very heavy rains on 14th and 15th (at Aberfoyle 2·80 in. followed by 1·15 in.) accounted for a great part of the month's total over wide areas. Earlier there had been moderate rains locally on 8th and 12th; but in general there were many fine days. The last week was very unsettled in north and east, and more than half of the month's rainfall in the Spey valley was registered during that period. For Scotland as a whole the mean rainfall represented 126 per cent. of the normal, as compared with 155 per cent. for England and Wales and 136 per cent. for Ireland.

The weather was stormy on 14th and 15th, and there was snow in various districts on 1st, 8th, 14th, and 26th. At the end of the month roads at high levels in the north were blocked with snow.

There was a severe thunderstorm in parts of Aberdeenshire and Banffshire on morning of 8th, and thunder at various points on 13th and 23rd, and on the Borders on night of 25th.

There were one or two very sunny days, *e.g.*, 18th and 19th, and the month was sunnier in western than in eastern districts.

Aurora was observed in Orkney on 26th and at Baltasound on 12th.

May 1922.—The month was characterised by a mean pressure equal to the normal; a high mean temperature, with a mean daily range all but equal to the normal; a somewhat high mean rainfall; and a very large excess of south-westerly winds.

Rather unsettled conditions prevailed during the first few days, and on 14th and 15th an Atlantic depression caused exceptionally heavy rains in western districts. Towards the end of the month an anticyclonic type of pressure distribution was in control. At Edinburgh, at sea-level, pressure was above 30 in. from 6th to 13th, on 19th and 20th, and from 24th to 31st, and the extremes there were 30·40 in. on 9th and 29·39 in. on 4th.

Temperature in most districts remained at a moderate level until about 15th, with one or two very cold days, and at Eskdalemuir on night of 12th-13th, a reading as low as 23°. The latter half of the month, on the other hand, was almost continuously warm, with 81° at Kelso and Montrose on 31st. The mean temperature was in many districts as much as 10° above that of the very cold month of April.

Rainfall aggregates exhibited extraordinary contrasts between eastern and western districts. In the east the month was a dry to very dry one, and at Marchmont, in Berwickshire (0·67 in. or only 27 per cent. of the normal) it was the driest May for at least 50 years. In the west, on the other hand, there was a decided excess, and towards north-west amounts greatly exceeded previous "records" for May. Thus at Fort William (11·63 in. or all but thrice the normal) the aggregate was almost 5 in. above the heaviest rainfall hitherto recorded in May (6·70 in. in 1920). Within the region of greatest excess there were heavy rains from 3rd to 6th, whilst heavy falls on 14th were followed by abnormally large amounts on 15th. At Fort William the total for 14th and 15th was about 4½ in. and at Ardgour the rainfall for 15th alone as much as 5·14 in. At Edinburgh, by way of contrast, there were only three days with as much as 0·10 in. No rain of importance fell anywhere after 21st. For Scotland as a whole the mean rainfall represented 129 per cent. of the normal as compared with 57 per cent. for England and Wales, and 69 per cent. for Ireland.

The weather was rather stormy early in the month, with snow at high levels on two or three days and sleet at Aberdeen on 12th.

Thunder occurred here and there on 3rd and 4th, with thunderstorms in some eastern districts between 15th and 17th and again between 21st and 25th. At Arbroath more than half the month's small rainfall was accounted for in a thunderstorm on evening of 21st.

Sunshine amounts varied considerably. In Orkney the month was the cloudiest May on record, whilst at Edinburgh it was a very sunny one. There were some very sunny days, notably 29th and 31st,—as much as 16 hours at Aberdeen on 31st, but in Orkney fog throughout that day.

June 1922.—The month was characterised by a low mean pressure; a slightly low mean temperature, with a slightly low mean daily range; a mean rainfall all but equal to the normal; and a large excess of south-westerly and westerly winds.

Until 12th pressure distribution was mainly of an anticyclonic type, but thereafter a series of depressions to the north of Scotland caused rather unsettled conditions at times. The mean pressure of the month was the lowest recorded in June since 1916. At Edin-

burgh, at sea-level, pressure was above 30 in. on 1st, from 3rd to 7th, and from 11th to 16th, and the extremes there were 30·18 in. on evening of 13th and 29·38 in. on morning of 25th.

The warm weather which had characterised the latter part of May persisted until about 10th or 12th of June. Highest readings occurred very generally on 1st, though towards the north-east of Scotland that day was the coldest of the month, with a maximum at Aberdeen of only 51° as compared with 84° at Ruthwell. From 13th onwards temperature was in general below the normal, with lowest readings on night of 13th-14th,— 30° at West Linton and Wolfelee.

In western coastal districts the month's rainfall was above the normal; whilst in inland and eastern areas there was a decided deficiency, though in eastern Aberdeenshire a well-defined excess. The dry period which had commenced about 21st May continued in most districts until 9th June or two or three days later. Thereafter rain was rather frequent, and in both the dry and the wet areas a large part of the month's rainfall was accounted for during fairly heavy falls on 12th, 18th, 22nd or 30th. In Berwickshire a fall on 12th represented about one third of the aggregate for the month. For Scotland as a whole the mean rainfall represented 102 per cent. of the normal, as compared with 64 per cent. for England and Wales and 69 per cent. for Ireland.

Fairly strong south-westerly to westerly winds were much in evidence.

On 21st snow fell on the summit of Ben Nevis.

Thunder occurred in west early on 2nd; in east somewhat widely on 24th; here and there on 25th; and at Aberdeen on 28th.

Except towards the south-east sunshine amounts were somewhat below the normal.

July 1922.—The month was characterised by an abnormally low mean pressure; an abnormally low mean temperature, with a low mean daily range; a slightly high mean rainfall; and an excess of winds from between south-west and north-west.

Until 10th pressure distribution was of a very unsettled type, with depressions at first to the north of Scotland, and then, between 5th and 9th, two very deep ones moving north-east across England. Around 15th and during the last week conditions were again somewhat unsettled. At Edinburgh, at sea-level, pressure was about 30 in. only from 10th to 12th, on 25th, and on 27th and 28th, and the extremes there were 30·19 in. on morning of 11th and 29·35 in. on morning of 2nd.

The cold weather which had set in about the middle of June persisted practically throughout the whole of July; the first week was exceptionally cold; and on the whole a colder July has been experienced during the last fifty years in Scotland only in 1888. Day temperatures were conspicuously low, but hardly lower than in the very cold July of 1920, and only at two or three places did the thermometer reach 70° . The highest reading reported was 71° at Smeaton on 11th and 18th, and in every other July during the last sixty years some higher reading than that has been recorded in Scotland. The lowest reading was 32° at Balmoral on 8th.

In the extreme north-west and in some south-western districts

the month's rainfall was below the normal, whilst in east and south there was a well-defined excess with rather large amounts in Aberdeenshire and the Border Counties. Until 9th wet or very wet weather was general, with some heavy falls in the north-east of Scotland from 6th to 9th; at Peterhead 1·37 in. on 6th, and at Aberlour 1·82 in. on 9th. Conditions again deteriorated around 15th, with some rather heavy falls on that day, and, after variable weather, there was a good deal of rain in most districts during the last week. For Scotland as a whole the mean rainfall represented 113 per cent. of the normal, as compared with 172 per cent. for England and Wales and 112 per cent. for Ireland.

Between 5th and 9th wind force was very high, and on 9th and 10th the Spey and other northern rivers were in flood.

A thunderstorm, with hail at places, was experienced in various districts on the afternoon of 4th, and again on 31st.

The month was a cloudy one, especially towards the north-east, but at Stornoway the sunshine aggregate was above the normal. In many districts the mean daily amount of sunshine was as much as 2 hours less than in June; in others 2 hours less than in May; and in the south of Scotland there was actually less sunshine than in any month since February.

August 1922.—The month was characterised by a slightly low mean pressure; an abnormally low mean temperature, with a low mean daily range; a low mean rainfall; and a practically normal wind distribution.

The pressure distribution was mainly of an unsettled type, with depressions passing eastwards beyond the north of Scotland. From 4th to 9th, however, with high pressure over the Icelandic region, and north-easterly winds over Scotland, disturbances took a track further to the south. On 7th and 8th two successive depressions moved north-eastward over England, with abnormally heavy rains in the Midland Counties, and moderate to rather heavy falls on the Scottish Borders.

The prolonged cold spell which had set in about the middle of June and persisted throughout July continued unbroken, and during the last sixty years in Scotland an appreciably colder August has been experienced only in 1912. The days were exceptionally cold, and at only a few stations did temperature on any day reach the moderate level of 70°. The highest reading reported was 75° at Logie Coldstone on 19th, and the lowest, 30° at Balmoral on 12th.

There were moderate rains in north and east on 1st and 2nd; local thunder rains on 6th, and on 8th rather widespread falls in southern districts, about $1\frac{1}{4}$ in. at Marchmont in Berwickshire. From 12th onwards rain was rather frequent, though heavy falls were rare. The most general fall occurred on 15th, with 1·61 in. at Ardgour. Only at isolated places in west and north did the month's rainfall reach the normal, and in general there was a well-marked deficiency. Indeed, in parts of the Lothians and in the Lower Tay valley aggregates were less than half the normal. The month in this respect differed notably from the cold August of 1912, which was very wet except in the extreme west. For Scotland as a whole, the mean rainfall represented 78 per cent. of the normal, as compared

with 132 per cent. for England and Wales and 104 per cent. for Ireland.

Thunder occurred in some eastern districts on 1st and 2nd; and sporadically on 6th, 17th, 22nd, and 31st.

There was a good deal of cloudy weather; but the month's sunshine aggregate almost equalled the normal at Edinburgh, and was above it at Stornoway.

September 1922.—The month was characterised by a slightly low mean pressure; a low mean temperature, with a slightly low mean daily range; a rather low mean rainfall; and an excess of northerly winds.

From 3rd to 10th pressure distribution was of an anticyclonic type; between 11th and 13th a large depression moved from Iceland on a south-easterly track directly over the British Isles; and thereafter conditions were unsettled. Highest pressure occurred everywhere on 8th, and lowest very generally on the morning of 13th. At Edinburgh, at sea-level, the extremes were 30·57 in. on 8th and 29·22 in. on 13th.

During the first week or so temperature was moderately high (72° at Kilmarnock on 4th and at Paisley on 8th); but on 8th a northerly current of air spread over the country, and for the next two weeks the weather was decidedly cold (24° at West Linton on 10th and 23° at Braemar on 22nd) with frequent ground frosts. Thereafter temperature was again moderately high on several days. The mean temperature was in nearly all districts appreciably below the normal, though considerably above that of the very cold September of 1918.

The period from 3rd to 10th was all but rainless in most districts; but from 12th onwards rain was frequent though heavy falls were rare. The most general fall was on 16th, when amounts were considerable in the west (1·66 in. at Inveraray). During the last five days south-easterly winds were accompanied by persistent rains in north-east and south-east, and some places in north-east received two-thirds of the whole month's rainfall during this period. On 26th Crathes had as much as 1·51 in. In the areas most affected by these rains aggregates were above the normal; but over the greater part of Scotland there was a deficiency, and some north-western districts had little more than half the normal. For Scotland as a whole the mean rainfall represented 87 per cent. of the normal, as compared with 128 per cent. for England and Wales and 117 per cent. for Ireland.

From 11th onwards winds were frequently strong, with gales at a few exposed places on 16th and 19th and in the extreme north-east on 26th and 27th.

Thunder occurred at Baltasound on 1st, at Kelso on 13th and 21st, and thunderstorms locally in the west on 19th.

The month was a cloudy one, though Stornoway received almost its normal allowance of sunshine. Over Scotland generally the frequency of rain, coupled with the absence of sunshine and a high humidity on many days, rendered the period after 12th very unfavourable for harvesting operations.

Snow fell on the Cairngorm mountains on 15th, and on 18th snow lay on Ben Nevis down to the 2000-foot level.

Aurora was observed here and there on 14th, 15th, and 17th; in Orkney on night of 21st; and at Baltasound on 27th.

October 1922.—The month was characterised by an abnormally high mean pressure; a slightly low mean temperature, with a slightly low mean daily range; a very low mean rainfall; and a large excess of northerly and easterly winds.

Pressure distribution was at first of a cyclonic type, but from 6th to 30th, except for a short break about 11th, anticyclonic conditions were dominant. From 16th onwards the anticyclone was centred at first over Scandinavia and then near Iceland, with a steady flow of air over Scotland from between north and east. On 31st a deep depression came in from the Atlantic. The mean pressure of the month has been exceeded in Scotland in October during the last 60 years only in 1919. At Edinburgh, at sea-level, the extremes were 30·48 in. on 19th and 29·66 in. on 31st.

Temperature was above the normal during the first half of the month, with highest readings between 14th and 16th (70° at Gordon Castle and Kelso), whilst the last ten days were everywhere very cold, with sharp frost on several consecutive nights in various districts. The lowest reading in screen was 16° at Braemar on night of 30th-31st.

Rain was general from 1st to 5th, and again on 11th and 12th. From 13th until almost the end of the month there was an unusually fine spell of weather over a great part of Scotland. In eastern districts, however, the prevailing north-easterly winds brought frequent though only moderately heavy precipitation, and at some places in the south-east rain fell on every day from 17th onwards. On 31st heavy rain set in from the west, spreading at night over the whole of Scotland—as much as 3·16 in. at Ullapool. Even with large falls on the 31st, which at many places accounted for a great part of the month's total, aggregates were practically everywhere much below the normal, with less than half the average in some northern and south-western districts. For Scotland as a whole the mean rainfall represented 59 per cent. of the normal, as compared with 33 per cent. for England and Wales and 37 per cent. for Ireland.

Snow fell locally in eastern districts between 26th and 30th, lying to a depth of several inches in some upland areas, and here and there in west on morning of 31st.

A severe thunderstorm occurred towards north-west on evening of 31st.

Sunshine aggregates were in general fully equal to the normal, and in western districts much sunny weather was experienced.

Aurora was observed on 5th, 17th, 25th, and 30th.

November 1922.—The month was characterised by an abnormally high mean pressure; a slightly high mean temperature, with a daily range practically equal to the normal; a low mean rainfall; and a very large excess of westerly winds.

For the first ten days conditions were of a cyclonic type, but thereafter the pressure distribution was dominated by a large anticyclone, which was centred over southern Scotland on 15th, but further south during the rest of the period. The mean pressure was

the highest for November since 1901. At Edinburgh, at sea-level, extremes were 30·80 in. on 15th and 28·97 in. on 6th, the former reading being the highest recorded in November since 1857.

The cold which had set in towards the end of October persisted till November 5th, but thereafter the only touch of wintry weather occurred about 25th. The week ending 18th was abnormally mild in Scotland, with a mean temperature at Edinburgh of 47°·6 compared with only 40°·3 at London (Kew Observatory). The mean temperature of the month was above the normal, but considerably lower than in November 1920. Extremes were 61° at Kelso on 14th, and 17° at Eskdalemuir on 25th.

Except in the extreme south-east, a good deal of rain fell during the first ten days, with as much as 3·21 in. at Castle Lachlan (Loch Fyne) on 5th, and 2·04 in. at Gruline (Mull) on 9th. From 11th to 29th there was very little rain towards east and south, and at a few places there was none; but in north and west rain was frequent though heavy falls were rare. The aggregate for the month was nearly everywhere below the normal,—for the fourth consecutive month in many districts. Less than a third of the normal was received over a considerable area near the Border, with little more than a quarter of an inch at Kelso. For Scotland as a whole the mean rainfall represented 70 per cent. of the normal, as compared with 55 per cent. for England and Wales and 42 per cent. for Ireland.

Snow fell in many places during the first four days, with considerable drifting in some north-eastern districts. Towards north-east there was again a little snow between 24th and 27th.

Thunder occurred locally in west on 2nd.

A severe gale was experienced in the north on 1st and 2nd, and further gales on 10th and 23rd.

There was dense fog in Glasgow on 20th.

The month was unusually sunny towards east and south, but rather cloudy in north-west.

Aurora was observed at Banff on 28th.

December 1922.—The month was characterised by a low mean pressure; a high mean temperature, with a low mean daily range; a rather low mean rainfall; and a large excess of south-westerly winds.

An anticyclone which had been in evidence over, or near, southern England since about the middle of November persisted until about December 15th, but thereafter a succession of very deep depressions over the north-east Atlantic caused unsettled and stormy conditions. From 18th onwards pressure was abnormally low. At Edinburgh, at sea-level, extremes were 30·38 in. on 10th, and 28·49 in. on 30th.

During the first half of the month the weather was for the most part of an extremely mild type, as had been the case throughout the greater part of November, but thereafter temperature differed little from the normal. Occasional touches of cold were of brief duration. The mean temperature for the month was decidedly above the average, though considerably below that for December 1921. The extremes were 59° at Banff on 12th, and 15° at Balmoral on 11th.

The first half of the month was dry towards the east, but rather

wet in the west (2·84 in. at Ardgour on 12th), whilst during the second half rain was very general though heavy falls were largely confined to western districts. The most widespread falls occurred on 22nd (2·14 in. at Leadhills), and on 25th (2·55 in. at Glen Etive and 2·18 in. at Killin). On the night of 29th rather heavy falls were experienced in east and south. Aggregates for the month were rather below the normal over a large part of Scotland, but here and there in both north-west and south-east there was a moderate excess. For Scotland as a whole the mean rainfall represented 86 per cent. of the normal, as compared with 122 per cent. for England and Wales and 102 per cent. for Ireland.

Snow, hail, and sleet were frequent during the second half of the month, and snow lay over considerable areas in western and central districts on 27th or 28th, though it soon melted except on high ground, where some drifting occurred. There was, however, no general snowstorm, and a Perthshire observer described the month as singularly free from snow for December.

Thunder occurred locally, and more particularly in the west on 18th, 21st, 22nd, 25th, 26th, 27th, or 29th.

Gales were experienced on 5th, 12th, and frequently from 18th onwards, more especially on 22nd and 25th.

The month was on the whole cloudy.

Aurora was observed at Gordon Castle and Banff on 14th, and at Fort Augustus on 30th.

NOTES ON METEOROLOGICAL TABLES, 1922.

The "Height of Station" is that of the cistern of the Barometer above Mean Sea-Level, or, where no barometer is in use, the height of the rain-gauge above Mean Sea-Level.

The observations of pressure have been reduced to mean sea-level but not to Lat. 45°. They are corrected for diurnal range.

The Air Temperatures are from standard thermometers exposed in the regulation "Stevenson Screen," or in a screen closely approaching the regulation pattern.

The averages for Temperature and Rainfall referred to in the statistics for individual stations are in general for the 35-year period 1881-1915. For stations at which the available observations do not cover the entire 35-year period, averages have been adjusted by comparison with neighbouring stations. The Sunshine averages are also for the 35-year period 1881-1915, or have been adjusted to that period.

The amount of cloud is estimated on a scale of 0-10, and a day is reckoned as a day of "clear sky" if the average of the estimates at the hours of observation is less than 2, and as an "overcast" day if the average is greater than 8.

The hours of observation refer to Greenwich Mean Time (G.M.T.). Thus 7h. or 7 = 7 a.m., 9 = 9 a.m., 13 = 1 p.m., 15 = 3 p.m., 18 = 6 p.m., 21 = 9 p.m., all G.M.T. During the operation of the Summer Time Act (from March 26th to October 8th) observations at a few stations were made at times which differed slightly from the times at which they were made during the rest of the year.

* In this Table the figures, except those for Absolute Extremes of Temperature and for Rain, are extracted from the Monthly Reports for 1922 already published by the Registrar-General for Scotland and refer only to some of the Principal Towns of Scotland. Those for the Absolute Extremes of Temperature refer to Scotland as a whole, as represented by the Abstract of Meteorological Observations for 1922 in the present Report. The generalized figures for Rain are based on a large number of observations and are extracted from the Monthly Weather Report of the Meteorological Office.
